

Essential iPhone Apps for Business Tap into Your Network

These business apps turn iPhone into the ultimate mobile IT toolkit that lets you support, administer, and troubleshoot your networked computers and servers. Visit the [iPhone in Business Apps](#) page to find apps for every business.

The App Store is on every iPhone. Many apps are free, and others start at just 99¢.

1Password Pro +

Use AES encryption to securely store important passwords and keep information protected; automatically log in to websites with a single tap.

RSA SecurID Software Token

Safeguard sensitive data and use iPhone as a two-factor RSA SecurID authentication token for laptop or desktop network connections.

iTeleport: Jaadu VNC +

Access files or control apps on a Mac or PC with automated setup for local and remote connectivity; enable both SSH- and VPN-based encryption.

Server Admin Remote +

Monitor your Mac OS X Server environment status and services. Manage start/stop services and other server admin tasks remotely.

Jump Desktop +

Control multiple systems wherever you are using simple gestures and full mouse support to zoom, pan, click, scroll, and type with ease.

VIP Access

Require a security code to help protect accounts, data, and transactions—and prevent your online information from getting into the wrong hands.

Network Utility Pro

Check the performance and status of corporate servers using terminal-like network tools such as ping, TCP/IP port scans, and GeoIP lookup.

Wyse PocketCloud Pro +

Enable complete access to remote servers and Mac and PC desktops for on-the-go productivity; enterprise-grade security includes 128-bit encryption and FIPS support.

+ This app is designed for both iPhone and iPad.
