

Apple Inc.

Apple Public Root Certification Practice Statement

Version 1.1

Effective Date: January 14, 2022

Table of Contents

1. INTRODUCTION	1
1.1. OVERVIEW	1
1.2. DOCUMENT NAME AND IDENTIFICATION	2
1.2.1. Revisions	2
1.3. PKI PARTICIPANTS.....	2
1.3.1. Certification Authorities	2
1.3.2. Registration Authorities.....	2
1.3.3. Subscribers	2
1.3.4. Relying Parties	2
1.3.5. Other Participants.....	3
1.4. CERTIFICATE USAGE.....	3
1.4.1. Appropriate Certificate Uses.....	3
1.4.2. Prohibited Certificate Uses.....	3
1.5. POLICY ADMINISTRATION.....	3
1.5.1. Organization Administering the Document.....	3
1.5.2. Contact Person	4
1.5.3. Person Determining CPS Suitability for the Policy.....	4
1.5.4. CPS Approval Procedures	4
1.6. DEFINITIONS AND ACRONYMS.....	4
1.6.1. Definitions.....	4
1.6.2. Acronyms.....	6
1.6.3. References.....	6
1.6.4. Conventions	6
2. PUBLICATION AND REPOSITORY RESPONSIBILITIES.....	7
2.1. REPOSITORIES.....	7
2.2. PUBLICATION OF CERTIFICATION INFORMATION	7
2.3. TIME OR FREQUENCY OF PUBLICATION	8
2.4. ACCESS CONTROLS ON REPOSITORIES	8
3. IDENTIFICATION AND AUTHENTICATION	9
3.1. NAMING	9
3.1.1. Types of Names	9
3.1.2. Need for Names to be Meaningful	9
3.1.3. Anonymity or Pseudonymity of Subscribers.....	9

3.1.4.	Rules of Interpreting Various Name Forms	9
3.1.5.	Uniqueness of Names.....	9
3.1.6.	Recognition, Authentication, and Role of Trademarks	10
3.2.	INITIAL IDENTITY VALIDATION.....	10
3.2.1.	Method to Prove Possession of Private Key	10
3.2.2.	Authentication of Organization Identity, Domain Identity and Email Control.....	10
3.2.3.	Authentication of Individual Identity.....	13
3.2.4.	Non-Verified Subscriber Information.....	13
3.2.5.	Validation of Authority	14
3.2.6.	Criteria for Interoperation	14
3.3.	IDENTIFICATION AND AUTHENTICATION FOR RE-KEY REQUESTS.....	14
3.3.1.	Identification and Authentication for Routine Re-Key	14
3.3.2.	Identification and Authentication for Re-Key After Revocation	14
3.4.	IDENTIFICATION AND AUTHENTICATION FOR REVOCATION REQUESTS	14
4.	CERTIFICATE LIFE-CYCLE OPERATIONAL REQUIREMENTS.....	16
4.1.	CERTIFICATE APPLICATION	16
4.1.1.	Who Can Submit a Certificate Application	16
4.1.2.	Enrollment Process and Responsibilities	16
4.2.	CERTIFICATE APPLICATION PROCESSING.....	17
4.2.1.	Performing Identification and Authentication Functions	17
4.2.2.	Approval or Rejection of Certificate Applications	18
4.2.3.	Time to Process Certificate Applications.....	18
4.3.	CERTIFICATE ISSUANCE	18
4.3.1.	CA Actions During Certificate Issuance.....	18
4.3.2.	Notification To Subscriber by the CA of Issuance of Certificate	19
4.4.	CERTIFICATE ACCEPTANCE	19
4.4.1.	Conduct Constituting Certificate Acceptance.....	19
4.4.2.	Publication of the Certificate by the CA.....	19
4.4.3.	Notification of Certificate Issuance by the CA to Other Entities	19
4.5.	KEY PAIR AND CERTIFICATE USAGE	20
4.5.1.	Subscriber Private Key and Certificate Usage	20
4.5.2.	Relying Party Public Key and Certificate Usage	20
4.6.	CERTIFICATE RENEWAL	20
4.6.1.	Circumstance for Certificate Renewal.....	20

4.6.2.	Who May Request Renewal	20
4.6.3.	Processing Certificate Renewal Requests	20
4.6.4.	Notification of New Certificate Issuance to Subscriber	20
4.6.5.	Conduct Constituting Acceptance of a Renewal Certificate	20
4.6.6.	Publication of the Renewal Certificate by the CA	20
4.6.7.	Notification of Certificate Issuance by the CA to Other Entities	21
4.7.	CERTIFICATE RE-KEY	21
4.7.1.	Circumstance for Certificate Re-Key	21
4.7.2.	Who May Request Certification of a New Public Key	21
4.7.3.	Processing Certificate Re-Keying Requests	21
4.7.4.	Notification of New Certificate Issuance to Subscriber	21
4.7.5.	Conduct Constituting Acceptance of a Re-Keyed Certificate	21
4.7.6.	Publication of the Re-Keyed Certificate by the CA	21
4.7.1.	Notification of Certificate Issuance by the CA to Other Entities	21
4.8.	CERTIFICATE MODIFICATION	21
4.8.1.	Circumstance for Certificate Modification	21
4.8.2.	Who May Request Certificate Modification	22
4.8.3.	Processing Certificate Modification Requests	22
4.8.4.	Notification of New Certificate Issuance to Subscriber	22
4.8.5.	Conduct Constituting Acceptance of Modified Certificate	22
4.8.6.	Publication of the Modified Certificate by the CA	22
4.8.7.	Notification of Certificate Issuance by the CA to Other Entities	22
4.9.	CERTIFICATE REVOCATION AND SUSPENSION	22
4.9.1.	Circumstances for Revocation	22
4.9.2.	Who Can Request Revocation	25
4.9.3.	Procedure for Revocation Request	26
4.9.4.	Revocation Request Grace Period	26
4.9.5.	Time Within Which CA Must Process the Revocation Request	26
4.9.6.	Revocation Checking Requirement for Relying Parties	26
4.9.7.	CRL Issuance Frequency	27
4.9.8.	Maximum Latency for CRLs	27
4.9.9.	On-Line Revocation/Status Checking Availability	27
4.9.10.	On-Line Revocation Checking Requirements	27
4.9.11.	Other Forms of Revocation Advertisements Available	28

4.9.12. Special Requirements Re Key Compromise	28
4.9.13. Circumstances for Suspension	28
4.9.14. Who Can Request Suspension	28
4.9.15. Procedure for Suspension Request.....	28
4.9.16. Limits on Suspension Period	28
4.10. CERTIFICATE STATUS SERVICES	28
4.10.1. Operational Characteristics	28
4.10.2. Service Availability	28
4.10.3. Operational Features	29
4.11. END OF SUBSCRIPTION	29
4.12. KEY ESCROW AND RECOVERY	29
4.12.1. Key Escrow and Recovery Policy and Practices.....	29
4.12.2. Session Key Encapsulation and Recovery Policy and Practices.....	29
5. MANAGEMENT, OPERATIONAL AND PHYSICAL CONTROLS	30
5.1. PHYSICAL CONTROLS	30
5.1.1. Site location and construction.....	30
5.1.2. Physical Access	30
5.1.3. Power and Air Conditioning	30
5.1.4. Water Exposures	30
5.1.5. Fire Prevention and Protection	30
5.1.6. Media Storage	31
5.1.7. Waste Disposal.....	31
5.1.8. Off-Site Backup.....	31
5.2. PROCEDURAL CONTROLS	31
5.2.1. Trusted Roles	31
5.2.2. Number of Persons Required per Task	32
5.2.3. Identification and Authentication for Each Role	32
5.2.4. Roles Requiring Separation of Duties	32
5.3. Personnel CONTROLS.....	32
5.3.1. Qualifications, Experience, and Clearance Requirements	32
5.3.2. Background Check Procedures	32
5.3.3. Training Requirements and Procedures.....	33
5.3.4. Retraining Frequency and Requirements.....	33
5.3.5. Job Rotation Frequency and Sequence	33

5.3.6. Sanctions for Unauthorized Actions	34
5.3.7. Independent Contractor Requirements	34
5.3.8. Documentation Supplied to Personnel	34
5.4. AUDIT LOGGING PROCEDURES	34
5.4.1. Types of Events Recorded	34
5.4.2. Frequency for Processing and Archiving Audit Logs	34
5.4.3. Retention Period for Audit Logs.....	34
5.4.4. Protection of Audit Log	34
5.4.5. Audit Log Backup Procedures.....	34
5.4.6. Audit Log Accumulation System (Internal Vs. External)	34
5.4.7. Notification To Event-Causing Subject	35
5.4.8. Vulnerability Assessments	35
5.5. RECORDS ARCHIVAL	35
5.5.1. Types of Records Archived	35
5.5.2. Retention Period for Archive	35
5.5.3. Protection of Archive	35
5.5.4. Archive Backup Procedures	35
5.5.5. Requirements for Time-Stamping of Records	35
5.5.6. Archive Collection System (Internal or External)	35
5.5.7. Procedures to Obtain and Verify Archive Information	36
5.6. KEY CHANGEOVER	36
5.7. COMPROMISE AND DISASTER RECOVERY	36
5.7.1. Incident and Compromise Handling Procedures.....	36
5.7.2. Computing Resources, Software, and/or Data Are Corrupted.....	36
5.7.3. Entity Private Key Compromise Procedures	36
5.7.4. Business Continuity Capabilities After a Disaster	37
5.8. CA OR RA TERMINATION	37
6. TECHNICAL SECURITY CONTROLS	38
6.1. KEY PAIR GENERATION AND INSTALLATION	38
6.1.1. Key Pair Generation.....	38
6.1.2. Private Key Delivery to Subscriber	39
6.1.3. Public Key Delivery to Certificate Issuer	39
6.1.4. CA Public Key Delivery to Relying Parties.....	39
6.1.5. Key Sizes	39

6.1.6.	Public Key Parameters Generation and Quality Checking.....	40
6.1.7.	Key Usage Purposes (as per X.509 v3. Key Usage Field)	40
6.2.	PRIVATE KEY PROTECTION AND CRYPTOGRAPHIC MODULE ENGINEERING CONTROLS.....	40
6.2.1.	Cryptographic Module Standards and Controls	40
6.2.2.	Private Key (n out of m) Multi-Person Control	41
6.2.3.	Private Key Escrow	41
6.2.4.	Private Key Backup	41
6.2.5.	Private Key Archival.....	41
6.2.6.	Private Key Transfer Into or From a Cryptographic Module.....	41
6.2.7.	Private Key Storage on Cryptographic Module	41
6.2.8.	Method of Activating Private Key	41
6.2.9.	Method of Deactivating Private Key	41
6.2.10.	Method of Destroying Private Key.....	42
6.2.11.	Cryptographic Module Rating.....	42
6.3.	OTHER ASPECTS OF KEY PAIR MANAGEMENT	42
6.3.1.	Public Key Archival	42
6.3.2.	Certificate Operational Periods and Key Pair Usage Periods	42
6.4.	ACTIVATION DATA	42
6.4.1.	Activation Data Generation and Installation	42
6.4.2.	Activation Data Protection.....	42
6.4.3.	Other Aspects of Activation Data.....	43
6.5.	COMPUTER SECURITY CONTROLS	43
6.5.1.	Specific Computer Security Technical Requirements.....	43
6.5.2.	Computer Security Rating.....	43
6.6.	LIFE CYCLE TECHNICAL CONTROLS	43
6.6.1.	System Development Controls.....	43
6.6.2.	Security Management Controls	44
6.6.3.	Life Cycle Security Controls.....	44
6.7.	NETWORK SECURITY CONTROLS.....	44

Appendix A: Apple Root and Subordinate CAs Hierarchy	70
Appendix B: Verification Sources	71
Sources List.....	71
Revision History.....	71

1. INTRODUCTION

1.1. OVERVIEW

This Certification Practice Statement (CPS) describes the practices employed by Apple Inc. ("Apple") acting as a Root CA and Subordinate CA that issues Publicly-Trusted Certificates ("Apple Public CA").

Root Certificates issued by the Apple Public CA are intended to be widely trusted by Application Software Suppliers. As such, the Apple Public CA inherits the benefits and responsibilities associated with those Application Software Suppliers' programs, which are listed in Section 1.1. of the Apple Public Root Certificate Policy ("Apple Public Root CP").

The Apple Public CA issues Root Certificates and Subordinate CA Certificates ("Sub-CA Certificate") for Apple Inc. and its subsidiaries exclusively. [Appendix A](#) lists all valid Root Certificates and associated Sub-CA Certificates.

The Apple Public CA also issues Subscriber Certificates and manages related services to:

- Secure connections based on the TLS protocol, and
- Digitally sign and encrypt email using the S/MIME standard.

This CPS provides the practices for issuance of all Certificates, including Root Certificates, Sub-CA Certificates and Subscriber Certificates, including Organization Validated (OV) TLS, as well as Mailbox-Validated and Sponsor-Validated S/MIME Certificates. This CPS further defines the practices relating to Certificate lifecycle services, such as issuance, management, and revocation, as well as details relating to other business, legal, and technical matters.

Any practice that is designed for a specific Certificate type is explicitly identified. Those practices are designed to conform to the requirements in the current version of the Apple Public Root CP. The Apple Public CA includes policy identifiers in Certificates as discussed in [Section 7.1.6](#), to assert that Apple makes commercially reasonable efforts to conform to the CAB Forum Baseline Requirements for the Issuance and Management of Publicly Trusted Certificates published at <http://www.cabforum.org>. In the event of any inconsistency between this CPS and the Apple Public Root CP, the Apple Public Root CP takes precedence. The CAB Forum Baseline Requirement takes precedence over the Apple Public Root CP.

This CPS is structured according to RFC 3647, and includes at least every section and subsection defined in RFC 3647. There are sections that include the words "No Stipulation", which mean that no specific practices exist for that section. This CPS contains no sections that are blank.

1.2. **DOCUMENT NAME AND IDENTIFICATION**

This is the Apple Public Root CPS. The name reflects the publicly-trusted nature of the Certification Authority regulated by it. This CPS has been assigned this Object Identifier within the applePublicPolicyID:

`aprCPSroot ::= {applePublicPolicyID (1) aprCPS (2) 1} — (1.2.840.113635.100.5.19.1.2.1)`

This and other Apple-owned arcs are used in the certificate policies extension as described in [Section 7.1.6](#).

1.2.1. **Revisions**

This CPS is reviewed and updated at least annually, as required by the Baseline Requirements.

The following revisions have been made to the original document:

Date	Changes	Version
12/09/2021	Initial release.	1.0
01/14/2022	Updated Appendix A with the Root Certificate and Sub-CA Certificate serial numbers.	1.1

1.3. **PKI PARTICIPANTS**

1.3.1. **Certification Authorities**

A Certification Authority (CA) is an organization that is authorized to issue, manage, and revoke Certificates. The Apple Public CA acts as the Root CA and Subordinate CA for Apple.

1.3.2. **Registration Authorities**

A Registration Authority (RA) performs identification and authentication checks for end-user Certificate applicants. The Apple Public CA acts as a Registration Authority. This function is not delegated to a third party.

1.3.3. **Subscribers**

A natural person or Legal Entity that has been issued a Certificate signed by an Apple Public CA Certificate and is legally bound by a Subscriber Agreement or Terms of Use.

1.3.4. **Relying Parties**

Any natural person or Legal Entity that relies on a Valid Certificate issued by the Apple Public CA.

1.3.5. Other Participants

1.3.5.1. CA/Browser Forum

See the Apple Public Root CP Section 1.3.5.1 for details

1.3.5.2. Application Software Supplier

See the Apple Public Root CP Section 1.3.5.2 for details

1.3.5.3. Apple CA Policy Authority

The Apple Policy Authority (APA) is a multi-disciplinary group from within Apple Inc., and its subsidiaries responsible for interpretation of requirements, maintenance, and approval of this CPS.

1.4. CERTIFICATE USAGE

1.4.1. Appropriate Certificate Uses

1.4.1.1. TLS Server and Client Certificates

The Apple Public CA issues and administers X.509 Certificates with a Server Authentication and/or Client Authentication purpose, in the Extended Key Usage extension, used to provide server authentication, data encryption, message integrity, and, optionally, client authentication.

1.4.1.2. S/MIME Certificates

The Apple Public CA issues and administers X.509 Certificates with an Email Protection purpose, in the Extended Key Usage extension, used to provide secure email. This type of Certificate may be used to digitally sign an email message from a verified email address. S/MIME Certificates are intended only to indicate that the email is from an authorized email account, but do not provide any assurance of the identity of the sending party. Further, emails associated with an S/MIME Certificate are not intended to replace a written or electronic signature.

1.4.2. Prohibited Certificate Uses

The Apple Public CA does not allow its Certificates to be used to create a Certification Authority nor to allow its Sub-CA Private Keys to sign a Certificate issued by another Certification Authority.

Certificates issued by the Apple Public CA shall not be used for any purpose that is not identified in [Section 1.4.1](#) as a permitted use.

1.5. POLICY ADMINISTRATION

1.5.1. Organization Administering the Document

This CPS is administered by the APA.

1.5.2. Contact Person

The contact information for this CPS is:

Apple CA Policy Authority
One Apple Park Way
Cupertino, CA 95014

(408) 996-1010
policy_authority@apple.com

1.5.2.1. Certificate Problem Reporting

To submit a Certificate Problem Report, there are two mechanisms:

- Relying Parties, Application Software Suppliers, and other third parties contact us at contact_pki@apple.com.
- Staff of Apple Inc. and its subsidiaries, use mechanisms available through the Certificate Enrollment system.

1.5.3. Person Determining CPS Suitability for the Policy

The APA determines the suitability and applicability of this CPS. The APA considers, among other factors, the results and observations received from independent auditors as specified in [Section 8](#), internal auditors, and Application Software Suppliers.

1.5.4. CPS Approval Procedures

This CPS and all its amendments are subject to approval by the APA. The CPS may change at any time without prior notice. Amendments to this CPS will be evidenced by a new version number and date and recorded in the revision table in [Section 1.2.1](#), except where the amendments are purely clerical.

1.6. DEFINITIONS AND ACRONYMS

1.6.1. Definitions

This CPS adopts the Apple Public Root CP Appendix C definitions. References not included in the Apple Public Root CP are listed below.

Term	Definition
A-Label	From RFC 5890 (http://tools.ietf.org/html/rfc5890): A Domain Label that starts with the characters "xn--" followed by a string that is a valid output of the Punycode algorithm and hence a maximum of 59 ASCII characters in length.

Term	Definition
Certificate Application	The document, physical or electronic, submitted by an Applicant to Apple Public CA for the purpose of obtaining a Certificate.
Certificate Requester	A natural person who is either the Applicant, employed by the Applicant, an authorized agent who has express authority to represent the Applicant, or a third party (such as an ISP or hosting company) that completes and submits an Certificate Application on behalf of the Applicant.
Certificate Transparency	A protocol for publicly logging the existence of TLS Certificates as they are issued or observed, in a manner that allows anyone to audit Certificate Authority activity and notice the issuance of suspect Certificates as well as to audit the Certificate logs themselves.
Distinguished Name	Within the scope of a CA related to the issuance and management of Certificates, this is a value that uniquely identifies each entity or resource to which a Certificate is issued.
Identification Credential	A cryptographic-based identity that uniquely identifies a staff member of Apple Inc., or one of its subsidiaries. The Identification Credential is associated with information such as the staff member's name and email address.
Internationalized Domain Name	From RFC 5890 (http://tools.ietf.org/html/rfc5890): A Domain Name that contains at least one A-label or U-label, but that otherwise may contain any mixture of LDH Label, Non-Reserved LDH labels, A-labels, or U-labels.
Mailbox-Validated S/MIME	An S/MIME Certificate that only includes verified email addresses as Subjects.
Sponsor-Validated S/MIME	An S/MIME Certificate that includes verified email addresses and their controlling Legal Entity as Subjects. This Certificate may also include the verified information of the natural person who is the email account holder.
U-Label	From RFC 5890 (http://tools.ietf.org/html/rfc5890): A string of Unicode characters including at least one non-ASCII character, expressed in a standard Unicode Encoding Form (such as UTF-8).

1.6.2. Acronyms

This CPS adopts the Apple Public Root CP Appendix C acronyms. Acronyms not included in the Apple Public Root CP are listed below.

Acronym	Term
DN	Distinguished Name
IDN	Internationalized Domain Name

1.6.3. References

This CPS adopts the Apple Public Root CP Section 1.6.3 references. References not included in the Apple Public Root CP will be listed below.

1.6.4. Conventions

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in the policies, guidelines, and requirements mentioned in [Section 1.1](#), have been interpreted in accordance with RFC 2119.

By convention, this CPS omits time and timezones when listing effective requirements such as dates. Except when explicitly specified, the associated time with a date is 00:00:00 UTC.

2. PUBLICATION AND REPOSITORY RESPONSIBILITIES

2.1. REPOSITORIES

The Apple Public CA repository is composed of multiple private and public areas as described below:

- Subscriber Certificates are placed in an area not publicly accessible. TLS Certificates intended to operate with Apple and Google clients are published to publicly accessible Certificate Transparency logs.
- Status information for Subscriber Certificates is available from publicly accessible locations linked from the Subscriber Certificate.
- Root Certificates and Sub-CA Certificates are available on publicly accessible websites.
- The Apple Public Root CP, this CPS, standard agreements and other policies (e.g. Privacy Policy) are made available on publicly accessible websites.
- Results of the annual audit are made available on publicly accessible websites.

The Apple Public CA has a process in place to develop, implement, and enforce, any new requirements set forth by the CAB Forum in the Baseline Requirements and by Application Software Suppliers. This process is triggered at least every quarter and relies on monitoring the CAB Forum and Application Software Supplier websites for document changes and newly approved ballots.

Modifications to this CPS will be logged in the Revisions table in Section 1.2.1 by increasing the CPS version and referencing the source of the requirement. If a full year passes without any changes to this document, a new dated entry and increased version number will be logged to note compliance with the requirement of a yearly review.

2.2. PUBLICATION OF CERTIFICATION INFORMATION

The latest versions of the Apple Public Root CP, this CPS and agreements are published at <https://www.apple.com/certificateauthority/public> and are readily accessible on a 24x7 basis. The Apple privacy policy is available at <https://www.apple.com/legal/privacy>

Links to test web pages used to demonstrate valid, revoked, and expired Certificates are available from pages linked from <https://www.apple.com/certificateauthority/public>.

Certificate status information may be made available through the Online Certificate Status Protocol (OCSP). Certificate status information may also be checked via the Certificate Revocation List (CRL), which is published by the Apple Public CA on a periodic basis. Refer to the CRL Distribution Point or the Authority Information Access extensions in the Certificates for the status information method used as described in Section 7.1.2.

2.3. TIME OR FREQUENCY OF PUBLICATION

Updates to this CPS and updated agreements are published as necessary, but within seven (7) business days after approval.

Certificate status information for Subscriber Certificates is published as specified in Section 4.9.7 for CRLs and Section 4.9.10 for OCSP.

Root Certificates and Sub-CA Certificates are published as soon as possible after issuance.

2.4. ACCESS CONTROLS ON REPOSITORIES

Read-only access to information in public repositories is provided without restriction. Read-only access to Certificates in private repositories is available through an internal process.

The Apple Public CA has implemented logical and physical security measures to prevent unauthorized persons from adding, deleting, or modifying repository entries.

3. IDENTIFICATION AND AUTHENTICATION

3.1. NAMING

3.1.1. Types of Names

All Certificates contain a Subject Distinguished Name ("Subject DN") populated with the names defined in [Section 7.1.4.2](#) and [Section 7.1.4.3](#). TLS Certificates and S/MIME Certificates contain the Subject Alternative Name extension populated with names defined in [Section 7.1.4.2.1](#).

3.1.2. Need for Names To Be Meaningful

All Certificates include a non-null Issuer Distinguished Name ("Issuer DN") containing information about Apple Inc., the issuer of the Certificate.

TLS Certificates include a non-null Subject DN containing the verified information of an entity (i.e. Subscriber), which is either Apple Inc. or one of its subsidiaries. The Fully Qualified Domain Names (FQDN) and/or Wildcard Domain Names included in the Subject Alternative Name extension and Common Name field identify the device(s) controlled by the Subscriber.

S/MIME Certificates include a non-null Subject DN containing either the verified information of an entity that sponsored the Certificate issuance and the verified email; or, the verified email address only. The Common Name field and the rfc822Name include the email address controlled by the individual requesting the S/MIME Certificate.

3.1.3. Anonymity Or Pseudonymity Of Subscribers

Generally, the Apple Public CA does not issue Certificates with pseudonyms; however, for IDNs, the Apple Public CA may include the Punycode version of the IDN as a subject name.

3.1.4. Rules of Interpreting Various Name Forms

Distinguished names in Certificates are interpreted using X.500 standards and ASN.1 syntax.

3.1.5. Uniqueness of Names

The uniqueness of each subject name in a Certificate is enforced as follows:

Certificate Type	Uniqueness Determination
Root Certificate	Root CA organization's name combined with its headquarters' country.
Subordinate CA Certificate	Subordinate CA organization's name combined with its headquarters' country.

Certificate Type	Uniqueness Determination
TLS Certificate	Domain Validated: Domain Name, whose uniqueness is controlled by the Internet Corporation for Assigned Names and Numbers ("ICANN") Organization Validated: The combination of Subscriber's organization name and headquarters' location, which may include locality, state/province and country.
S/MIME Certificate	Mailbox-Validated: A verified unique email address. Sponsor-Validate: The combination of a unique email and sponsor organization's name. If present, the name of the email account holder.

3.1.6. Recognition, Authentication, and Role of Trademarks

Apple, iOS, and macOS are trademarks of Apple Inc., in the United States and other countries.

Applicants are prohibited from requesting Certificates that contain content which infringes on the intellectual property and commercial rights of others. The Apple Public CA does not determine whether Applicants have intellectual property rights in the name used in a Certificate Application nor does the Apple Public CA resolve any dispute concerning the ownership of a domain name or trademark. The Apple Public CA may reject any Certificate Application and revoke any Certificate because of such a dispute.

3.2. INITIAL IDENTITY VALIDATION

3.2.1. Method To Prove Possession of Private Key

The Certificate Applicant must demonstrate that it rightfully holds the Private Key corresponding to the Public Key listed in the Certificate by submitting a PKCS#10 Certificate Signing Request (CSR).

3.2.2. Authentication of Organization Identity, Domain Identity and Email Control

Information to be included in a Certificate's Subject DN is validated as explained in the following sections.

3.2.2.1. Identity

For Certificates whose Applicant is a Legal Entity, the Apple Public CA confirms that the Applicant, the Applicant's jurisdiction of incorporation, registration, or place of business is not on any United States Government denied list, list of

prohibited persons, or other list that prohibits doing business with such organization.

The Apple Public CA verifies the Legal Entity's identity (i.e., name, existence) and address using documentation provided by, or through communication with, at least one of the following as described in Baseline Requirements Section 3.2.2.1:

1. A government agency in the jurisdiction of the Legal Entity's legal creation, existence, or recognition as listed in [Appendix B](#), or
1. A third party database that is periodically updated and considered a Reliable Data Source,
2. A site visit by a representative of the Apple Public CA, or
3. An Attestation Letter provided by the Applicant.

3.2.2.2. DBA/Tradename

When the Subject Identity Information includes a DBA or trademark, the Apple Public CA uses a method below to perform the verification.

1. Documentation provided by, or communication with, a government agency in the jurisdiction of the Applicant's legal creation, existence, or recognition,
2. A Reliable Data Source,
3. Communication with a government agency responsible for the management of such DBAs or tradenames,
4. An Attestation Letter accompanied by documentary support, or
5. A utility bill, bank statement, credit card statement, government-issued tax document, or other form of identification that the Apple Public CA determines to be reliable.

3.2.2.3. Verification of Country

When countryName is included in a Certificate, the Apple Public CA verifies it using [Section 3.2.2.1](#).

3.2.2.4. Validation of Domain Authorization or Control

Prior to issuance of a TLS Certificate, the Apple Public CA validates each FQDN to be included in such Certificates. As part of the validation process, the Apple Public CA records the validation method, and the associated Baseline Requirements' version.

Validation of FQDNs is performed using these methods described in the Baseline Requirements sections:

- (3.2.2.4.2) – Email, Fax, SMS, or Postal Mail to Domain Contact, by sending a Random Value via email to the Domain Contact, and receiving a confirming response utilizing the Random Value within 20 days of its generation.
- (3.2.2.4.7) – DNS Change, by confirming the presence of Random Value in either a DNS TXT or CAA record for either 1) an Authorization Domain Name; or 2) an Authorization Domain Name that is prefixed with a label that begins with an underscore character. Confirmation is completed within 20 days of generation of the Random Value.

FQDNs are also reviewed to prevent use of Internal Names.

The Apple Public CA does not issue Certificates with the .onion Domain Name nor with mixed character sets.

3.2.2.5. Authentication for an IP Address

The Apple Public CA does not issue TLS Certificates containing IP Addresses.

3.2.2.6. Wildcard Domain Validation

Every Wildcard Domain Name in a Certificate Application is verified before issuing a Wildcard Certificate. The Wildcard Domain Name's FQDN part is compared with Domain Names in the "ICANN DOMAINS" section of the Public Suffix List. When none of those FQDNs is present in the list, the Certificate may be issued. When the FQDN is present in the list, additional information is requested from the Applicant to verify ownership before the Certificate can be issued.

3.2.2.7. Data Source Accuracy

Prior to using any data source as a Reliable Data Source, the Apple Public CA considers the following during its evaluation:

- The age of the information provided,
- The frequency of updates to the information source,
- The data provider and purpose of the data collection,
- The public accessibility of the data availability, and
- The relative difficulty in falsifying or altering the data.

The Apple Public CA does not use its own databases as a Reliable Data Sources.

3.2.2.8. CAA Records

Prior to issuing a TLS Certificate, the Apple Public CA checks the CAA record to verify the presence of "pki.apple.com" in either the 'issue' or 'issuewild' properties for each FQDN provided. The 'iodef' property is checked but no action will be

taken. The following criteria will be used to establish whether to issue the Certificate:

- If the CAA record is not present in DNS, the Certificate may be issued.
- If the 'issue' and 'issuewild' properties list the name "pki.apple.com" as an authorized CA, the Certificate will be issued.
- If the 'issue' or 'issuewild' properties list a name other than "pki.apple.com" as an authorized CA, the Certificate will not be issued.
- In any other cases, the Certificate will not be issued.

The CAA check is performed immediately before the issuance of the Certificate, but does not exclude the possibility of other CAA checks. See [Section 4.2.1](#).

The Apple Public CA logs actions taken based on CAA records, and documents issuance prevented by CAA for feedback to the CA/Browser Forum.

3.2.2.9. E-mail Verification

Prior to issuing an S/MIME Certificate, the Apple Public CA verifies the Applicant controls the email address by confirming either:

- The Domain Name contained in the domain portion of the email address is owned or controlled by the Legal Entity in the Organization field in accordance with [Section 3.2.2.4](#) of this CPS and Section 3.2.2.9.1 of the Apple Public CP, or,
- Receipt of a response utilizing the same Random Value previously sent by the Apple Public CA via email to the email address being verified in accordance with Section 3.2.2.9.1 of the Apple Public CP.

3.2.2.10. High Risk Certificate Requests

Prior to issuing a Certificate, every Base Domain Name in the request is compared to an externally compiled database of the top 1,000 most popular Domain Names. If any Base Domain Name is present in the list, and it is not owned/controlled by the Applicant, the request is rejected.

3.2.3. Authentication of Individual Identity

The Apple Public CA does not issue TLS Certificates to an Applicant who is a natural person.

The Apple Public CA does not issue S/MIME Certificates that include the name of a natural person.

3.2.4. Non-Verified Subscriber Information

The Apple Public CA does not include non-verified Subscriber information in Certificates.

3.2.5. Validation of Authority

Authority is validated based on Certificate type.

Root Certificate, Sub-CA Certificate and TLS Certificates

The Apple Public CA takes reasonable steps to establish that a Certificate Application is from Apple staff. Certificate Requesters authenticate to enrollment systems with the Identification Credential that verifies they are an employee of the Subscriber, i.e., Apple Inc., before a Certificate Application can be submitted.

For Root Certificate and Sub-CA Certificates, the Certificate Requestor is confirmed to be a Trusted Role and to have express authorization to submit a Certificate Application for these types of Certificates.

For TLS Certificates, a list of pre-approved Certificate Requesters, is included in the enrollment system limiting who can submit Certificate Applications. S/MIME Certificates

For Mailbox-Validated S/MIME Certificates, authority is implicit based on demonstration of control according to [Section 3.2.2.10](#).

For Sponsor-Validated S/MIME Certificates, authority of the request is verified through the demonstrated control by the Legal Entity over the email address using a technical or administrative control.

3.2.6. Criteria for Interoperation

No stipulation.

3.3. IDENTIFICATION AND AUTHENTICATION FOR RE-KEY REQUESTS

3.3.1. Identification and Authentication for Routine Re-Key

Not applicable, since the Apple Public CA does not provide Certificate re-key as defined in [Section 4.7](#).

3.3.2. Identification and Authentication for Re-Key After Revocation

Subscribers may request a new Certificate after a revocation. Those Certificate Applications follow the same process as the initial Certificate issuance.

3.4. IDENTIFICATION AND AUTHENTICATION FOR REVOCATION REQUESTS

The Subscriber, or for TLS Certificates, the Subscriber's representatives specified in [Section 4.9.2](#), can request revocation. Those individuals are listed in the enrollment system; before they can request revocation, they must present their Identification Credential to access the enrollment system.

When a revocation is requested as result of a Certificate Problem Report, an RA Officer will request and/or execute revocation as discussed in Section 4.9.3. The RA Officer will identify to the enrollment system using appropriate credentials as discussed in Section 5.2.3.

4. CERTIFICATE LIFE-CYCLE OPERATIONAL REQUIREMENTS

4.1. *CERTIFICATE APPLICATION*

4.1.1. Who Can Submit a Certificate Application

Root Certificate and Sub-CA Certificate

Only individuals in Trusted Roles working for the Apple Public CA may submit Certificate Applications for Root Certificates and Sub-CA Certificates.

TLS Certificates and S/MIME Certificates

Only individuals who are the Applicant or an authorized Certificate Requester representing the Applicant may submit Certificate Applications.

The Apple Public CA will not issue TLS Certificates to an Applicant if either the Applicant, the Applicant's Jurisdiction of Incorporation, Registration, or Place of Business is on any United States Government denied list, or other list that prohibits doing business with such organization.

The Apple Public CA uses information produced as a result of suspected phishing or other fraudulent usage or concerns (including revocations and rejected Certificate Applications) to enhance the verification process of Applicant and Domain Name validation in order to identify subsequent suspicious Certificate Applications.

4.1.2. Enrollment Process and Responsibilities

The Apple Public CA has an enrollment process that combines online and offline functions to obtain:

- An executed Subscriber Agreement or Terms of Use.
- Information about the Applicant including, but not limited to, organization name, contacts, and authorizing individuals,
- Information about the Certificate including, but not limited to, a CSR, email address, and FQDNs,
- Appropriate approvals by authorized Applicant's representatives or the Applicants themselves.

Prior to issuing a Certificate, the Apple Public CA may collect evidence from sources other than the Applicant to confirm information to be included in the Certificate.

The Apple Public CA may leverage the verification information for an Applicant such as Legal existence, Address of Place of Business, Verified Method of Communication, Operational Existence, Domain Name, approver's name, title and authority for multiple Certificate Applications. The use of this information is limited to the maximum age specified in [Section 4.2.1](#).

4.2. CERTIFICATE APPLICATION PROCESSING

4.2.1. Performing Identification and Authentication Functions

The Apple Public CA verifies Certificate Application information using the practices in the sections noted next to each validation category.

During the validation process, to clarify any discrepancies, Validation Specialists are required to obtain additional information by contacting the Applicant, Applicant Representatives or other sources of information. When documentation is not available in English, the Apple Public CA will engage a translator.

Root Certificates and Sub-CA Certificates

- Applicant Identity: Sections [3.2.2.1](#), [3.2.2.2](#) and [3.2.2.3](#), and
- Identification and Authentication for each Trusted Role: [Section 5.2.3](#).

TLS Certificates

- Applicant Identity: Sections [3.2.2.1](#), [3.2.2.2](#) and [3.2.2.3](#),
- Domain Ownership/Control: [Section 3.2.2.4](#),
- Validation of Authority: [Section 3.2.5](#),
- CAA: [Section 3.2.2.8](#),
- High Risk Certificate Request: [Section 3.2.2.10](#), and
- Wildcard Domain Validation: [Section 3.2.2.6](#).

S/MIME Certificates

- Email Verification: [Section 3.2.2.9](#),
- Organization: Sections [3.2.2.1](#) and [3.2.2.3](#), and
- Validation of Authority: [Section 3.2.5](#),
- Domain Ownership/Control: [Section 3.2.2.4](#).

Age of Validated Data

The Apple Public CA leverages information produced by a Certificate Application for approval of multiple Certificates. In order to use such information for a subsequent application, the date when the validation was performed is recorded, and the age of information is calculated to not exceed the limits below:

- Legal or operational existence and identity: 824 days
- Assumed name: 824 days

- Verified Method of Communication: 824 days
- Name, Title, Agency, and Authority: 824 days
- Domain Name for TLS and S/MIME Certificates: 397 days

4.2.2. Approval or Rejection of Certificate Applications

The Apple Public CA rejects Certificate Applications that cannot be verified based on the practices outlined in [Section 4.2.1](#), for a specific Certificate type. Request rejection reasons may include, but are not limited to, requests that:

- are not for an Applicant's owned Domain Name,
- include Domain Names in the list of high risk Domain Names for which the Applicant is not the owner or has no control,
- include Internal Names or Reserved IP Addresses,
- include an email address associated that cannot be verified,
- are submitted by an Applicant representative without proper authority,
- remain incomplete or inconsistent after a reasonable amount of time after clarifications have been requested.

4.2.3. Time to Process Certificate Applications

Certificate Applications are processed within a reasonable time of receipt. There is no time stipulation to complete the processing of an application unless otherwise indicated in a relevant agreement.

4.3. *CERTIFICATE ISSUANCE*

4.3.1. CA Actions During Certificate Issuance

A Certificate is created and issued following approval of the Certificate Application.

Root Certificates and Sub-CA Certificates

The Apple Public CA generates CA Certificates during a scripted ceremony, conducted by trusted personnel observing separation of duties and two-person controls consistent with [Section 5.2](#). Ceremonies for Root Certificates or Sub-CA Certificates, for Applicants other than Apple, are witnessed by external qualified auditors.

TLS Certificates and S/MIME Certificates

The Apple Public CA's enrollment system will use the information provided as part of the verification practices in [Section 3.2](#), data in the online submission, and configuration constraints. Among other things, the system will:

- use the Public Key in the CSR,
- populate verified data in the Subject DN; and prevent populating fields only with metadata such as ".", "-", and " " (i.e., space) characters,
- populate verified FQDNs and Wildcard Domain Names in the Subject Alternative Name extension that meet the Domain Label specifications in [Section 7.1.4.3](#),
- verify field limitations are respected, for example, the Organization field is 64 characters or shorter.

The Apple Public CA posts TLS Certificates to Certificate Transparency logs to ensure the Certificate can operate with Apple and Google clients.

4.3.2. Notification To Subscriber by the CA of Issuance of Certificate

Upon issuance of a Certificate, the Apple Public CA will notify the Subscriber by sending an email to the email address associated with the Certificate Application.

4.4. CERTIFICATE ACCEPTANCE

4.4.1. Conduct Constituting Certificate Acceptance

A Subscriber's use of the Certificate constitutes Certificate acceptance.

4.4.2. Publication of the Certificate by the CA

After issuance, Certificates are published to a private Repository, as specified in [Section 2.1](#). The Apple Public CA also records issuance of TLS Certificates to Certificate Transparency logs.

The Apple Public CA publishes all Root Certificates and Sub-CA Certificate to the Repository.

4.4.3. Notification of Certificate Issuance by the CA to Other Entities

The Apple Public CA discloses in the CCADB all Sub-CA Certificates that chain up to Root Certificates trusted in Application Software Supplier programs.

For Sub-CA Certificates issued by a Root Certificate already trusted, disclosure occurs within 7 days of Sub-CA Certificate issuance and prior to issuance of any Certificates under such Sub-CA Certificate. For Sub-CA Certificates issued by a Root Certificate not yet included in Application Software Supplier programs, disclosure occurs when the Root Certificate is submitted to the programs.

The Apple Public CA notifies other entities by posting a TLS Certificate to multiple publicly accessible Certificate Transparency logs.

4.5. KEY PAIR AND CERTIFICATE USAGE

4.5.1. Subscriber Private Key and Certificate Usage

Certificate use must be consistent with the permitted uses described in [Section 1.4.1](#).

Prior to using a Certificate, Subscribers represent that they will comply with the obligations outlined in [Section 9.6.3](#) by accepting the Terms of Use or Subscriber Agreement.

4.5.2. Relying Party Public Key and Certificate Usage

Each Relying Party represents that prior to relying on a Certificate issued by the Apple Public CA, it will comply with the obligations outlined in [Section 9.6.4](#).

Any warranties provided by the Apple Public CA are only valid if a Relying Party's reliance was reasonable and if the Relying Party adhered to the appropriate Relying Party Agreement set forth in the Repository.

4.6. CERTIFICATE RENEWAL

Certificate renewal is the issuance of a new Certificate to the Subscriber with the same Public Key and verified information (e.g. identity, domains, email address) in the Certificate. A renewed Certificate has a new serial number and an expiration date ending after the expiration date of the Certificate being renewed.

The Apple Public CA does not currently provide Certificate renewal.

4.6.1. Circumstance for Certificate Renewal

No stipulation.

4.6.2. Who May Request Renewal

No stipulation.

4.6.3. Processing Certificate Renewal Requests

No stipulation.

4.6.4. Notification of New Certificate Issuance to Subscriber

No stipulation.

4.6.5. Conduct Constituting Acceptance of a Renewal Certificate

No stipulation.

4.6.6. Publication of the Renewal Certificate by the CA

No stipulation.

4.6.7. Notification of Certificate Issuance by the CA to Other Entities

No stipulation.

4.7. *CERTIFICATE RE-KEY*

Certificate re-key is the issuance of a new Certificate to the Subscriber with a new Public Key and same verified information (e.g. identity, domains, email address) in the Certificate. A re-keyed Certificate has a new serial number and same expiration date in the Certificate being re-keyed.

The Apple Public CA does not currently provide Certificate re-key.

4.7.1. Circumstance for Certificate Re-Key

No stipulation.

4.7.2. Who May Request Certification of a New Public Key

No stipulation.

4.7.3. Processing Certificate Re-Keying Requests

No stipulation.

4.7.4. Notification of New Certificate Issuance to Subscriber

No stipulation.

4.7.5. Conduct Constituting Acceptance of a Re-Keyed Certificate

No stipulation.

4.7.6. Publication of the Re-Keyed Certificate by the CA

No stipulation.

4.7.1. Notification of Certificate Issuance by the CA to Other Entities.

No stipulation.

4.8. *CERTIFICATE MODIFICATION*

Certificate modification means the issuance of a new Certificate to the Subscriber with the same Public Key but different verified information (e.g. identity, domains, email) in the Certificate. A modified Certificate has a new serial number and same or other expiration date ending after the expiration date of the Certificate being modified.

The Apple Public CA does not currently provide Certificate modification.

4.8.1. Circumstance for Certificate Modification

No stipulation.

4.8.2. Who May Request Certificate Modification

No stipulation.

4.8.3. Processing Certificate Modification Requests

No stipulation.

4.8.4. Notification of New Certificate Issuance to Subscriber

No stipulation.

4.8.5. Conduct Constituting Acceptance of Modified Certificate

No stipulation.

4.8.6. Publication of the Modified Certificate by the CA

No stipulation.

4.8.7. Notification of Certificate Issuance by the CA to Other Entities

No stipulation.

4.9. *CERTIFICATE REVOCATION AND SUSPENSION*

4.9.1. Circumstances for Revocation

4.9.1.1. Reasons for Revoking a Subscriber Certificate

A Subscriber may request revocation of its Certificate at any time for any reason.

TLS Certificates

The Apple Public CA will revoke a TLS Certificate within 24 hours after confirming one or more of the following occurred:

1. The Subscriber requests in writing that the Apple Public CA revoke the TLS Certificate,
2. The Subscriber notifies the Apple Public CA that the original TLS Certificate Application was not authorized and does not retroactively grant authorization,
3. The Apple Public CA obtains evidence that the Subscriber's Private Key corresponding to the Public Key in the TLS Certificate suffered a Key Compromise,
4. The Apple Public CA is made aware of a demonstrated or proven method that can easily compute the Subscriber's Private Key based on the Public Key in the Certificate (such as a Debian weak key, see <https://wiki.debian.org/SSLkeys>),

5. The Apple Public CA obtains evidence that the validation of domain authorization or control for any FQDN or IP address in the TLS Certificate should not be relied upon, or
6. An Application Software Supplier asks to revoke a Subscriber's Certificate and all allowed appeal instances have been exhausted.

The Apple Public CA may revoke a TLS Certificate within 24 hours and will revoke a TLS Certificate within 5 days after confirming that one or more of the following occurred:

1. The TLS Certificate no longer complies with the requirements of Sections 6.1.5 and 6.1.6 of this CPS,
2. The Apple Public CA obtains evidence that the TLS Certificate was misused,
3. The Apple Public CA confirms that a Subscriber has violated one or more of its material obligations under any relevant agreement,
4. The Apple Public CA confirms any circumstance indicating that use of a Fully-Qualified Domain Name or IP address in the TLS Certificate is no longer legally permitted (e.g. a court or arbitrator has revoked a Domain Name Registrant's right to use the Domain Name, a relevant licensing or services agreement between the Domain Name Registrant and the Applicant has terminated, or the Domain Name Registrant has failed to renew the Domain Name),
5. The Apple Public CA confirms that a Wildcard Certificate has been used to authenticate a fraudulently misleading subordinate FQDN,
6. The Apple Public CA confirms a material change in the information contained in the TLS Certificate,
7. The Apple Public CA confirms that the TLS Certificate was not issued in accordance with the Apple Public Root CP or this CPS,
8. The Apple Public CA confirms that any of the information appearing in the TLS Certificate is inaccurate,
9. The Apple Public CA's right to issue TLS Certificates under the Apple Public Root CA expires or is revoked or terminated, unless the Apple Public CA has made arrangements to continue maintaining the CRL/OCSP Repository,
10. Revocation is required by the Apple Public Root CP and/or this CPS,
11. The Apple Public CA confirms a demonstrated or proven method that exposes the Subscriber's Private Key to compromise, or if there is clear

evidence that the specific method used to generate the Private Key was flawed,

12. The Private Key used by the Apple Public CA to issue the Certificate is suspected to have been compromised, or
13. The Apple Public CA is made aware of a violation of an Application Software Supplier's then-current program requirements and was not yet part of the Apple Public Root CP or this CPS, which resulted in the misissuance of the Certificate.

S/MIME Certificates

The Apple Public CA will revoke a S/MIME Certificate after confirming one or more of the following occurred:

1. The Subscriber indicates that the original Certificate Application was not authorized and does not retroactively grant authorization,
2. The Apple Public CA obtains reasonable evidence that the Subscriber's Private Key (corresponding to the Public Key in the Certificate) has been compromised or is suspected of compromise,
3. The Apple Public CA obtains reasonable evidence that the Certificate has been used for a purpose outside of that indicated in the Certificate or in the Terms of Use,
4. The Apple Public CA receives notice or otherwise becomes aware that a Subscriber has violated one or more of its material obligations under the Terms of Use,
5. The Apple Public CA receives notice or otherwise becomes aware of any circumstance indicating that use of the email address in the Certificate is no longer legally permitted,
6. The Apple Public CA receives notice or otherwise becomes aware of a material change in the information contained in the Certificate,
7. A determination that the Certificate was not issued in accordance with this CPS,
8. The Apple Public CA determines that any of the information appearing in the Certificate is not accurate,
9. The Apple Public CA ceases operations for any reason and has not arranged for another CA to provide revocation support for the Certificate,
10. The Apple Public CA Private Key used in issuing the Certificate is suspected to have been compromised, or

11. The Apple Public CA is made aware of a violation of an Application Software Supplier's then-current program requirements and was not yet part of the Apple Public Root CP or this CPS, which resulted in the misissuance of the Certificate.

4.9.1.2. Reasons for Revoking a Sub-CA Certificate

The Apple Public CA will revoke a Sub-CA Certificate within 7 days after confirming one of the following occurred:

1. The APA requests revocation in writing,
2. The Apple Public CA becomes aware than the original request for the Sub-CA Certificate was not authorized,
3. The Private Key corresponding to the Public Key in the Sub-CA Certificate suffered a Key Compromise or no longer complies with the requirements of this CPS Sections [6.1.5](#) and [6.1.6](#),
4. The Apple Public CA obtains evidence that the Sub-CA Certificate was misused,
5. The Apple Public CA is made aware that the Sub-CA Certificate was not issued in accordance with this CPS,
6. The Apple Public CA determines that any of the information appearing in the Sub-CA Certificate is inaccurate or misleading,
7. The Apple Public CA ceases operations for any reason and has not made arrangements for another CA to provide revocation support for the Certificate,
8. The Apple Public CA's right to issue Certificates under this CPS expires or is revoked or terminated, unless the Apple Public CA has made arrangements to continue maintaining the CRL/OCSP Repository, or
9. Revocation is required by the Apple Public Root CP, or this CPS.

4.9.2. Who Can Request Revocation

For S/MIME Certificates, the Subscriber who requested the original Certificate; or for TLS Certificates, an authorized Subscriber representative (i.e., Certificate Signer, Certificate Approver, Certificate Requestors) may request the Certificate revocation.

Application Software Suppliers, and other third parties may submit Certificate Problem Reports, as outlined in [Section 1.5.2.1](#), informing the Apple Public CA of reasonable cause to revoke the Certificate.

The Apple Public CA reserves the right to revoke any Certificates, without notice, for any reason, or if it believes the Private Key has been compromised.

4.9.3. Procedure for Revocation Request

The Apple Public CA provides an online revocation process available 24x7 to Subscribers. The Subscriber, or Subscriber representative, will be required to authenticate to the enrollment system with their Identification Credential. After authentication, the requestor indicates that they wish to revoke their Certificate and then the Certificate will be automatically revoked. After the Certificate is revoked a revocation notification is sent to the Subscriber.

After a Certificate Problem Report is received for a Certificate, it will be investigated by the Apple Public CA compliance team within 24 hours of receipt.

If, as a consequence of the investigation, revocation is required for a TLS or S/MIME Certificate, an Apple Public CA representative will authorize the revocation in accordance with [Section 4.9.1.1.](#) and an RA Officer will execute it.

If a revocation is required for a Sub-CA Certificate, the Compliance team will engage the APA for revocation approval and a ceremony will be promptly scheduled. After a Sub-CA Certificate is revoked, the Apple Public CA reports such revocation to Application Software Suppliers through the CCADB within 30 days of revocation. If the revocation is due to a security concern, the Apple Public CA will file an appropriate public disclosure with the Application Software Suppliers that require it (e.g. Mozilla).

4.9.4. Revocation Request Grace Period

There is no grace period within which the Subscriber must make a revocation request. Revocations can only be processed for Certificates that have not expired.

4.9.5. Time Within Which CA Must Process the Revocation Request

A revocation request submitted to the online enrollment system is processed immediately.

For revocation requests submitted through a Certificate Problem Report, a preliminary report is provided to the party that submitted the Certificate Problem Report and to the Subscriber associated to the Certificate. Reports to the Subscriber are submitted to the email address associated to the original Certificate Application.

The Apple Public CA processes revocation requests within the timeframes outlined in [Section 4.9.1.1.](#)

4.9.6. Revocation Checking Requirement for Relying Parties

Relying Parties are solely responsible for performing revocation checking on all Certificates in the chain before deciding whether or not to rely on the information in a Certificate. The Apple Public CA provides revocation status via mechanisms that are embedded in the Certificate (e.g., CRL Distribution Point or OCSP URI).

4.9.7. CRL Issuance Frequency

For the status of Subscriber Certificates, the Apple Public CA issues a new CRL generally every 24 hours and no later than 48 hours. CRLs are issued with a nextUpdate time 7 days from the thisUpdate time. If necessary, emergency CRLs can be generated before the 24-hour period is complete.

For the status of Sub-CA Certificates, the Apple Public CA issues a new CRL no later than 100 days. CRLs are issued with a nextUpdate time no larger than 210 days from the thisUpdate time. When a Sub-CA Certificate is revoked, a new CRL will be generated within 24 hours.

4.9.8. Maximum Latency for CRLs

CRLs are posted to the repository within a commercially reasonable time after generation.

4.9.9. On-Line Revocation/Status Checking Availability

The Apple Public CA's OCSP implementation conforms to RFC 6960.

The Apple Public CA provides OCSP status using a delegated OCSP model. Certificates used to sign OCSP responses contain the id-pkix-ocsp-nocheck extension.

The appropriate OCSP Responder is available via the URI noted in the Authority Information Access extension in the Certificate.

4.9.10. On-Line Revocation Checking Requirements

Before relying on a Certificate, a Relying Party must confirm the validity of a Certificate in accordance with [Section 4.9.6](#).

The Apple Public CA's OCSP service supports the HTTP GET method for receiving requests. A valid OCSP status request must contain at a minimum the Certificate serial number and Issuer DN to receive a valid response. Once an OCSP request has been validated, a signed response is sent to the requestor indicating the status of the Certificate and showing the request was successful. Failed OCSP requests will generate a failure status back to the requestor.

For status of Subscriber Certificates, the OCSP responses will have a validity interval between eight (8) hours and ten (10) days. For responses shorter than 16 hours, updates are available prior to one-half of the validity period before the nextUpdate. For responses equal or greater than 16 hours, updates are available at least eight hours prior to the nextUpdate, and no later than four days after the thisUpdate.

For status of Sub-CA Certificates, the OCSP responses will have a validity interval no larger than 210 days. When a Sub-CA Certificate is revoked, a new response will be available within 24 hours.

Appropriate response values are provided in [Section 7.3.1](#).

4.9.11. Other Forms of Revocation Advertisements Available

No other forms of revocation advertisements are available.

4.9.12. Special Requirements re Key Compromise

In the event of key compromise of the a Root or Sub-CA Private Key, the Apple Public CA will use the practice in [Section 5.7.3](#).

In the event that a Subscriber's Private Key is reported as comprised by a party other than the Subscriber, the Apple Public CA will request that this party proves possession of the Private Key by either submitting it via email, as part of the Certificate Problem Report; or, sign a randomly generated string provided by the Apple Public CA as a follow up to the initial report.

4.9.13. Circumstances for Suspension

The Apple Public CA does not support Certificate suspension.

4.9.14. Who Can Request Suspension

No stipulation.

4.9.15. Procedure for Suspension Request

No stipulation.

4.9.16. Limits on Suspension Period

No stipulation.

4.10. *CERTIFICATE STATUS SERVICES*

4.10.1. Operational Characteristics

The Apple Public CA offers Certificate status information using CRLs and OCSP Responses. Certificate status services are available via the CRL Distribution Point or the OCSP pointer noted in the Certificates.

Revocation entries on a CRL or OCSP Response are available until after the expiration date of the revoked Certificate.

4.10.2. Service Availability

The Apple Public CA takes commercially reasonable steps to provide Certificate status services 24x7. Those services are operated with resources sufficient to provide a response time of ten (10) seconds or less under normal operating conditions.

The Apple Public CA maintains a continuous 24x7 ability to respond internally to a high-priority Certificate Problem Report, and where appropriate, forward such a complaint to law enforcement authorities, and/or revoke a Certificate that is the subject of such a complaint.

4.10.3.Operational Features

No stipulation.

4.11. *END OF SUBSCRIPTION*

A Subscriber may end subscription for a Certificate by allowing the Certificate to expire, or by revoking the Certificate prior to expiration.

4.12. *KEY ESCROW AND RECOVERY*

4.12.1.Key Escrow and Recovery Policy and Practices

The Apple Public CA, when authorized by the Subscriber, maintains a copy of the Subscriber Private Keys associated with S/MIME Certificates used for email encryption. Those Private Keys are escrowed in an encrypted format, which provides a strength commensurate to the Private Key being escrowed.

Escrowed keys can only be recovered after confirming the authority of the party requesting the Private Key. Subscribers must present their Identification Credential to the enrollment system before they can recover Private Keys. Apple representatives may obtain an escrowed Private Key after they demonstrate they have been authorized by the Apple's legal or human resources teams to request the recovery.

4.12.2. Session Key Encapsulation and Recovery Policy and Practices

No stipulation.

5. MANAGEMENT, OPERATIONAL AND PHYSICAL CONTROLS

The Apple Public CA implements management, operational and physical controls as specified in Section 5 of the Apple Public Root CP.

5.1. PHYSICAL CONTROLS

5.1.1. Site Location and Construction

Equipment supporting CA operations resides within a physically secured location in geographically separated Apple owned facilities.

5.1.2. Physical Access

Physical protection is achieved through the creation of clearly defined security perimeters with appropriate physical barriers to entry around the business premises, data center, and CA operations.

Data center site physical security mechanisms include facility design and construction, perimeter security (e.g., heavy duty fences, gates, and barriers), and logical and personnel controls (e.g., access management, badging, and multi-factor authentication).

Within the data center, additional security controls are placed on the High Security Environments (HSE) housing CA operations. Separate logical and physical security mechanisms protect the HSEs, situated in either cages or secured rooms, and include access management controls, such as two-person access and multi-factor authentication.

By default, access to the CA operations room or cage is disabled for all personnel, with access provisioning granted on an as-needed basis for specific time intervals. Access to safes protecting assets requires two-person control.

Apple's global security team is responsible for physical access to Apple data centers and HSEs, including access management systems, access records, monitoring and alerting systems, and security personnel to provide a continuous presence at each data center facility.

5.1.3. Power and Air Conditioning

Equipment is protected to reduce risks from power and air conditioning disruption or failure. Power is maintained in emergency situations by uninterrupted power supplies and generators. Redundant power supplies are tested on a regular basis.

5.1.4. Water Exposures

Equipment is protected to reduce risks from water exposure by means of raised floors, temperature and humidity monitoring.

5.1.5. Fire Prevention and Protection

The data centers are protected with fire suppression systems, alarms, and monitors.

5.1.6. Media Storage

Media is maintained securely within the CA facilities and is subject to the same degree of protection as the CA hardware. Backups are stored at secondary data center locations, as per [Section 5.1.8](#).

5.1.7. Waste Disposal

Media used to collect sensitive information is destroyed or zeroized prior to disposal.

Cryptographic devices are physically destroyed or zeroized in accordance with manufacturer's guidance prior to disposal.

5.1.8. Off-Site Backup

Online backups are aggregated and retained at secondary Apple Data Center locations. For purposes of backup and recovery, offline Root and Sub-CA Private Keys, which are stored in encrypted form, are transported to alternate secure storage under dual control. The backups exist in multiple copies in different geographic locations.

5.2. *PROCEDURAL CONTROLS*

5.2.1. Trusted Roles

Individuals in Trusted Roles have access to or control over cryptographic operations, including access to restricted operations within the Apple Public CA. Individuals in Trusted Roles must be Apple employees whose identity has been confirmed through background checking procedures as defined in [Section 5.3](#) and who have accepted the responsibilities of a Trusted Role. Functions performed by persons in Trusted Roles are distributed in such a manner that prevents one person from subverting the security and trustworthiness of CA operations.

The responsibilities for each of the Trusted Roles include administration and operation tasks as described in the sections below.

5.2.1.1. CA Administrator

The CA Administrator is responsible for installation, configuration, and maintenance of the CA software, configuring Certificate Profiles, and generating and backing up Root and Sub-CA keys. CA Administrators do not issue Certificates to Subscribers.

5.2.1.2. RA Officer

The RA Officer, also known as a Validation Specialist, is responsible for verifying the identity of Applicant / Subscribers and accuracy of information included in Certificates, approving and executing the issuance of Certificates, and requesting the revocation of Certificates.

5.2.1.3. Audit Administrator

The Audit Administrator is responsible for reviewing, maintaining, and archiving audit artifacts and performing or overseeing internal compliance audits to ensure that the CA and other systems are operating in accordance with this CPS.

5.2.1.4. Operator

Operators, such as system administrators and CA operators, are responsible for keeping systems updated with software patches and other maintenance needed for system stability and recoverability.

5.2.1.5. RA Administrator

RA Administrators install, configure and manage the RA software, including Sub-CAs and Certificate Profiles.

5.2.2. Number of Persons Required per Task

Root and Sub-CA Private Keys are backed up, stored, and recovered by individuals in Trusted Roles (both CA Administrators) under multi-person control in a physically secured environment.

5.2.3. Identification and Authentication for Each Role

Individuals in Trusted Roles identify and authenticate themselves using multi-factor authentication, including a certificate-based credential, before being allowed access to the systems necessary to perform their Trusted Roles.

The Apple Public CA temporarily locks access to secure CA processes if more than 5 consecutive login attempts fail.

5.2.4. Roles Requiring Separation of Duties

To accomplish separation of duties, Apple Public CA specifically designates individuals to the Trusted Roles defined in [Section 5.2.1](#) above. Audit Administrators and RA Officers may not concurrently hold any other Trusted Role.

5.3. PERSONNEL CONTROLS

5.3.1. Qualifications, Experience, and Clearance Requirements

Individuals in Trusted Roles are Apple personnel who have successfully completed a background check consistent with federal, state, and local regulations and have demonstrated the trustworthiness, skills and experience to accept Trusted Role responsibilities. Personnel in Trusted Roles undergo training prior to performing any duties as part of that role.

5.3.2. Background Check Procedures

Apple implements several processes at both time of hire and throughout an employee's tenure to assess and validate an individual's identity and trustworthiness.

5.3.2.1. Identity verification

Apple employees complete identity verification at time of hire. U.S. based Apple employees successfully complete the verification by means of government-issued photo identification compliant with the requirements of the U.S. Department of Homeland Security Form I-9 Employment Eligibility Verification.

5.3.2.1. Trustworthiness assessment

Apple employees are required to successfully complete a background check at time of hire. Background checks can include both criminal and non-criminal services (i.e. education verification and previous employment verification) consistent with federal, state, and local regulations.

Every Apple employee's performance is reviewed on a yearly basis to ensure they are meeting Apple's high standards.

5.3.3. Training Requirements and Procedures

Individuals serving as RA Officers, also known as Validation Specialists, that perform information verification duties, receive skills-training and pass an examination prior to commencing their job role. This training includes:

- Basic Public Key Infrastructure knowledge,
- Authentication and vetting policies and procedures,
- Common threats to the information verification process (including phishing and other social engineering tactics),
- Applicable functions relative to their assigned Trusted Role.

The Apple Public CA maintains records of such training and ensures that personnel entrusted with Validation Specialist duties maintain a satisfactory skill level.

5.3.4. Retraining Frequency and Requirements

Apple employees complete training at time of hire and on an ongoing basis. Annual training includes but is not limited to: Worldwide Business Conduct, Privacy, and Compliance and Security training, with required modules determined by role and access level.

Individuals serving as RA Officers are expected to maintain skill levels consistent with the requirements of [Section 5.3.3](#) and are retrained as requirements and responsibilities are added or modified.

5.3.5. Job Rotation Frequency and Sequence

No stipulation.

5.3.6. Sanctions for Unauthorized Actions

Appropriate disciplinary actions are taken for unauthorized actions or other violations of policies and procedures. Disciplinary actions may include measures up to and including termination and are commensurate with the frequency and severity of the unauthorized actions.

5.3.7. Independent Contractor Requirements

Independent contractors are not allowed to serve in Trusted Roles.

5.3.8. Documentation Supplied to Personnel

Policies and procedures are posted in an internal site that is made available to individuals in Trusted Roles.

5.4. *AUDIT LOGGING PROCEDURES*

5.4.1. Types of Events Recorded

The Apple Public CA records the events specified in Section 5.4.1 of the Apple Public Root CP.

The Apple Public CA makes these records available to its external auditor as proof of compliance with this CPS.

5.4.2. Frequency for Processing and Archiving Audit Logs

The Apple Public CA reviews system logs at least monthly to detect anomalies or irregularities. Automated tools are used to alert for specific conditions. Reviewed activities are tracked and documented, and are made available to external auditors upon request.

5.4.3. Retention Period for Audit Logs

The Apple Public CA retains audit logs as specified in Section 5.4.3 of the Apple Public Root CP, and makes these audit logs available to its external auditor upon request.

5.4.4. Protection of Audit Log

The Apple Public CA implements practices to prevent modification, substitution or deletion of records described in [Section 5.4.1](#) during the retention periods specified in [Section 5.4.3](#).

5.4.5. Audit Log Backup Procedures

Systems hosting audit data are backed up daily, then replicated to separate, long-term storage on a regular interval.

5.4.6. Audit Log Accumulation System (Internal Vs. External)

Audit logs are collected using enterprise-grade storage management systems, stored only within Apple data centers, as defined in [Section 5.4.5](#).

5.4.7. Notification To Event-Causing Subject

No stipulation.

5.4.8. Vulnerability Assessments

The Apple Public CA performs an annual risk assessment as specified in Section 5.4.8 of the Apple Public CP.

5.5. *RECORDS ARCHIVAL*

5.5.1. Types of Records Archived

The Apple Public CA archives the record types specified in Section 5.5.1 of the Apple Public Root CP.

5.5.2. Retention Period for Archive

The Apple Public CA retains all documentation relating to archived information described in Section 5.5.1 for the duration specified in Section 5.5.2 of the Apple Public Root CP.

5.5.3. Protection of Archive

The Apple Public CA implements practices to prevent modification, substitution or deletion of archives described in Section 5.5.1 during the retention periods specified in Section 5.5.2

- Archive records are maintained in a manner to prevent unauthorized modification, substitution, or destruction.
- The systems hosting the archived data therein are subject to authentication and authorization mechanisms, redundancy, backup storage in secondary sites, equipment updates and media refreshes.
- Apple ensures that the archived records are retained in the software systems until no longer needed, or migrated to a replacement system in the event that the record retention requirement is longer than the lifespan of the software system.

5.5.4. Archive Backup Procedures

The Apple Public CA archives are backed up to a separate Apple data center facility.

5.5.5. Requirements for Time-Stamping of Records

The systems hosting the archived data automatically timestamp archive records as they are created. System time is synchronized using the Network Time Protocol (NTP). Cryptographic time-stamping of archive records is not performed.

5.5.6. Archive Collection System (Internal or External)

The Apple Public CA collects archive information internally.

5.5.7. Procedures to Obtain and Verify Archive Information

Apple restricts access to archive data to authorized trusted personnel and Apple staff only, in accordance with internal procedures and security policies. Apple does not release any archived information except as allowed by law as specified in [Section 9](#).

5.6. KEY CHANGEOVER

Towards the end of each Root CA or Sub-CA lifetime, a new CA Key Pair is generated following the procedures in [Section 6.1.1.1](#).

The old Root CA Private Key will no longer be used to sign new Sub-CA Certificates. All subsequently issued Sub-CA Certificates issued from the new Root CA are signed with the new Private Key

The old Sub-CA Private Key will no longer be used to sign new Subscriber Certificates, but will be used to sign CRLs and delegated OCSP Responder Certificates. All subsequently issued Subscriber Certificates, CRLs, and delegated OCSP Responder Certificates issued from the new Sub-CA are signed with the new Private Key.

The Apple Public CA will continue to protect its old Private Keys, and makes the old Root and Sub-CA Certificates available to verify signatures at least until all of the Certificates signed with the respective Private Key have expired.

5.7. COMPROMISE AND DISASTER RECOVERY

5.7.1. Incident and Compromise Handling Procedures

The Apple Public CA maintains an Incident Response Plan and a Disaster Recovery Plan as specified in Section 5.7.1 of the Apple Public Root CP.

5.7.2. Computing Resources, Software, and/or Data Are Corrupted

In the event of a disaster in which computing resources, software, and/or data is corrupted, appropriate escalation, incident investigation, and response will be initiated. The Apple Public CA will halt the issuance or validation of Certificates if compromise of those systems, or data, may cause the generation of Certificates or status responses that do not comply with this CPS.

In the event of a disruption, when restoring operations, the Apple Public CA will give priority to reestablishing the generation of Certificate status information.

5.7.3. Entity Private Key Compromise Procedures

In the event of compromise, suspected compromise, or loss of a Root or Sub-CA Private Key, appropriate escalation, incident investigation, and response will be initiated. This response will include filing an incident report with the Application Software Suppliers as stated in Section 5.7.1 of the Apple Public Root CP.

If the investigation confirms the need for revocation of a Sub-CA Certificate, the Apple Public CA will revoke the compromised Certificate. Subsequently, a new CA

Key Pair will be created, and a new Sub-CA Certificate created. The Apple Public CA will also revoke, and if necessary reissue, all impacted Subscriber Certificates.

If a Root Certificate is compromised, the Apple Public CA will work with Application Software Suppliers to address the retirement of the Certificate in an orderly manner. Actions prior to retirement may include the revocation of all Sub-CA and Subscriber Certificates and subsequent re-issuance.

5.7.4. Business Continuity Capabilities After a Disaster

The Disaster Recovery Plan noted in [Section 5.7.1](#) relies on preparation before a disaster event as well as actions triggered by the disaster event.

Prior to a disaster event, systems are required to be architected with multiple redundant layers and are allocated in multiple geographically diverse locations to provide continuous operation. Risk vectors are re-evaluated continuously and the plan is strengthened based on findings.

When a disaster impacts one of the redundant layers, the other layers will continue operations without, or with minimal, interruption.

5.8. CA OR RA TERMINATION

Any decision to terminate the Apple Public CA shall be approved by the Apple CA Policy Authority prior to the effective date of termination.

As part of the termination procedure, the Apple Public CA will execute the termination plan that addresses the following:

- Provision of notice to parties affected by the termination,
- The revocation of Certificates issued by the Apple Public CA,
- The preservation of the Apple Public CA's archives and records.

6. TECHNICAL SECURITY CONTROLS

6.1. *KEY PAIR GENERATION AND INSTALLATION*

6.1.1. Key Pair Generation

6.1.1.1. CA Key Pair Generation

The Apple Public CA generates CA Key Pairs used in Root and Sub-CA Certificates during a scripted ceremony, conducted by trusted personnel observing separation of duties and two-person controls consistent with [Section 5.2](#), witnessed by external qualified auditors. A report is produced by the auditors opining on the ceremony.

Ceremonies are conducted in secure facilities described in [Section 5.1](#). CA Key Pairs are generated using FIPS-validated Cryptographic Modules complying with [Section 6.2.1](#). The ceremony produces evidence available to auditors to verify that appropriate controls were met.

6.1.1.2. RA Key Pair Generation

No stipulation.

6.1.1.3. Subscriber Key Pair Generation

The Apple Public CA does not generate Key Pairs for TLS Certificates. These Key Pairs are generated by the Subscriber.

Before including a Subscriber's key in a TLS Certificate, the key is verified to meet the minimum sizes specified in [Section 6.1.5](#), parameters in [Section 6.1.6](#), and checked against weak keys (e.g., Debian weak keys). Keys that do not meet those specifications are rejected.

The Apple Public CA does not generate Key Pairs used in S/MIME Certificates except when those keys are used in Certificates issued to Apple staff. All keys are verified to meet size requirements in [Section 6.1.5](#) and parameters in [Section 6.1.6](#).

The Apple Public CA does not allow key re-use, which prevents known compromised keys associated with revoked Certificates or rejected Certificate Applications to be used in a new Certificate Application.

The Apple Public CA also uses a validation mechanism prior to issuing the Certificate. This mechanism includes evaluation of the submitted Public Key using constraints configured as a result of monitoring guidelines and warnings from CAB Forum, Application Software Supplier websites, NIST and other relevant sources. These constraints include detecting keys generated with known flawed methods, or that are associated with demonstrated or proven methods that expose the Applicant's Private Key to compromise. Keys generated with those methods are rejected.

6.1.2. Private Key Delivery to Subscriber

For S/MIME Certificates issued to Apple staff, the Key Pair is provided to the Subscriber using a PKCS#12 file protected by a password with a strength commensurate to the protected key. The PKCS#12 file is distributed separately from the password.

6.1.3. Public Key Delivery to Certificate Issuer

Public Keys for TLS Certificates are submitted using a PKCS#10 CSR over a TLS connection.

6.1.4. CA Public Key Delivery to Relying Parties

Root Certificates are distributed via Application Software Suppliers' operating systems, browser, mail and other clients. Root Certificates are also hosted on the online Repository indicated in [Section 2.1](#).

Sub-CA Certificates are hosted online and can be reached through a URL provided in the Authority Information Access' calssuer field of the Subscriber Certificate. Software clients used by Relying Parties can leverage path discovery to obtain Certificates using the calssuer information.

6.1.5. Key Sizes

6.1.5.1. Root Certificates

The Apple Public CA generates CA Key Pairs for its Root Certificates and ensures they meet the following:

- RSA Modulus Size (bits): 4096
- Elliptic Curve: NIST P-384

6.1.5.2. Sub-CA Certificates

The Apple Public CA generates CA Key Pairs for its Sub-CA Certificates and ensures they meet the following:

- RSA Modulus Size (bits): 2048, 3072 or 4096
- Elliptic Curve: NIST P-256 or P-384

6.1.5.3. Subscriber Certificates

The Apple Public CA ensures that Key Pairs used in Subscriber Certificates meet the following:

TLS Certificates:

- RSA Modulus Size (bits): 2048, 3072 or 4096

- Elliptic Curve: NIST P-256 or P-384

S/MIME Certificates:

- RSA Modulus Size (bits): 2048, 3072 or 4096
- Elliptic Curve: NIST P-256 and P-384

6.1.6. Public Key Parameters Generation and Quality Checking

For Subscriber RSA keys, the enrollment system confirms that the value of the public exponent is an odd number in the range between $2^{16} + 1$ and $2^{256} - 1$. The system also confirms the modulus is an odd number, not the power of a prime, and has no factors smaller than 752.

For Subscriber ECDSA keys, the enrollment system confirms the validity of all keys using the ECC Partial Public Key Validation Routine first two checks.

For CA RSA keys, the CA system confirms that the value of the public exponent is an odd number in the range between $2^{16} + 1$ and $2^{256} - 1$. The system also confirms the modulus is an odd number, not the power of a prime, and has no factors smaller than 752.

For CA ECDSA keys, the CA system confirms the validity of all keys using the ECC Partial Public Key Validation Routine first two checks.

6.1.7. Key Usage Purposes (as per X.509 v3. Key Usage Field)

The Apple Public CA uses the Private Keys corresponding to Root Certificates only for purposes of signing:

- The Root Certificate itself,
- Sub-CA Certificates,
- Certificates for OCSP Responders, and,
- CRLs.

The use of a specific key is determined by the Key Usage and Extended Key Usage extensions in the X.509 Certificate. The Apple Public CA uses in its Certificates only the Key Usage and Extended Key Usage extension values defined in [Section 7.2](#).

6.2. PRIVATE KEY PROTECTION AND CRYPTOGRAPHIC MODULE ENGINEERING CONTROLS

6.2.1. Cryptographic Module Standards and Controls

Root, Sub-CA, and OCSP Responder Private Keys are generated and stored in Cryptographic Modules that are validated as FIPS 140-2 level 3.

6.2.2. Private Key (n out of m) Multi-Person Control

The Apple Public CA generates Root CA and Sub-CA Key Pairs, including backups, and activates Private Keys for signature operations in a physically secure environment, under multi-person control by individuals in Trusted Roles.

6.2.3. Private Key Escrow

Root and Sub-CA Private Keys are backed up but not escrowed.

S/MIME Private Keys may be escrowed in accordance with practices in [Section 4.12](#).

6.2.4. Private Key Backup

The Apple Public CA backs up its Root CA and Sub-CA Private Keys in a physically secure environment, under multi-person control by individuals in Trusted Roles, storing at least one backup at a secure, secondary location. All copies of its Root and Sub-CA Private Keys are protected in the same manner as the original.

6.2.5. Private Key Archival

The Apple Public CA does not archive Private Keys used in Root Certificates or Sub-CA Certificates.

6.2.6. Private Key Transfer Into or From a Cryptographic Module

Transfer of the Root and Sub-CA Private Key into or from a Cryptographic Module, performed only for key backup procedures, is done in accordance with the manufacturers' guidelines, under multi-person control by individuals in Trusted Roles. The Apple Public CA never allows the Private Keys to exist in plaintext outside of these Cryptographic Modules at any point in time.

6.2.7. Private Key Storage on Cryptographic Module

Root and Sub-CA Private Keys, including backups, are stored in Cryptographic Modules that meet the specifications in [Section 6.2.1](#).

6.2.8. Method of Activating Private Key

Activation of Root and Sub-CA Private Keys is done in accordance with the guidelines provided by the manufacturer of the Cryptographic Module, under multi-person control, performed by individuals in Trusted Roles. Activation data will be protected from disclosure or communication to any external party.

6.2.9. Method of Deactivating Private Key

Sub-CA Private Keys are deactivated upon executing a deactivation command. Root Private Keys are deactivated upon system power off. The Apple Public CA prevents unauthorized access to any activated Cryptographic Modules.

6.2.10. Method of Destroying Private Key

Root and Sub-CA Private Keys on Cryptographic Modules will be destroyed by individuals in Trusted Roles in accordance with instructions and documentation provided by the manufacturer, when no longer needed.

6.2.11. Cryptographic Module Rating

See specification in [Section 6.2.1](#).

6.3. OTHER ASPECTS OF KEY PAIR MANAGEMENT

6.3.1. Public Key Archival

Public Keys are archived as part of the Certificate archival in compliance with [Section 5.5](#).

6.3.2. Certificate Operational Periods and Key Pair Usage Periods

The operational period for Key Pairs is the same as the Validity Period for associated Certificates.

Certificates issued by the Apple Public CA are limited to the following Validity Periods:

- Root Certificates: up to 7390 days.
- Sub-CA Certificates: up to 3740 days.
- TLS Certificates: up to 396 days.
- S/MIME Certificates: up to 800 days.
- OCSP Responder for Root: up to 136 days.
- OCSP Responder for Sub-CA: up to 43 days.

6.4. ACTIVATION DATA

6.4.1. Activation Data Generation and Installation

The Apple Public CA follows the manufacturer specifications for the activation data required for Root and Sub-CA Private Keys. As specified in [Section 6.2.2](#), to activate a Cryptographic Module, M of N secrets are required. Those secrets are generated when the Cryptographic Module is initialized and they are stored on separate secure tokens.

6.4.2. Activation Data Protection

The Apple Public CA protects from disclosure the data used to unlock Private Keys using a combination of cryptographic and physical access control mechanisms. Secure tokens with activation data are kept under multi-person control, as specified in [Section 5.1.2](#), and require a PIN of minimum eight (8) digits to unlock for use.

The Apple Public CA locks access to secure CA processes if a certain number of failed password attempts occur as specified in [Section 5.2.3](#).

6.4.3. Other Aspects of Activation Data

No stipulation.

6.5. *COMPUTER SECURITY CONTROLS*

6.5.1. Specific Computer Security Technical Requirements

The Apple Public CA configures systems to meet the following security technical requirements, at a minimum:

- User identities are authenticated before access is permitted to systems or applications,
- User privileges are managed to limit users to their assigned roles,
- Audit records are generated and archived for applicable transactions,
- Domain integrity boundaries are enforced for security critical processes, and
- Recovery is supported for key or system failures.

The Apple Public CA enforces multi-factor authentication on any account capable of directly causing Certificate issuance.

6.5.2. Computer Security Rating

No stipulation.

6.6. *LIFE CYCLE TECHNICAL CONTROLS*

6.6.1. System Development Controls

The Apple Public CA acquires CA and OCSP Responder software from a reputable third-party. The vendor has an established software development life-cycle management process.

The Apple Public CA develops some software modules in-house, also following an established software development life-cycle management process.

For Apple Public CA operations, this software is installed on dedicated hardware.

Purchases of hardware and software assets are conducted using established procurement processes and delivered using tracked and verifiable mechanisms in order to reduce the likelihood of tampering

The Apple Public CA uses a formal configuration management methodology for installation and ongoing maintenance of any CA system. Any modifications or upgrades to the system are documented and controlled.

6.6.2. Security Management Controls

The Apple Public CA system configurations are periodically reviewed to identify any unauthorized changes.

The Apple Public CA maintains change control mechanisms to document, control, monitor, and maintain the installation and configuration of the CA systems, including any modifications or upgrades. When loading software onto a CA system, the Apple Public CA verifies that the software is the correct version and is supplied by the vendor free of any modifications.

6.6.3. Life Cycle Security Controls

No stipulation.

6.7. NETWORK SECURITY CONTROLS

Network security measures are in place to protect against denial of service and intrusion attacks, including denying all but the necessary services to support the CA systems, network segmentation, access limited to CA personnel, and regular review of network, firewall, ACL, and load balancer configurations. Initial configurations are reviewed to verify that all versions are correct and are set as supplied by the vendor free of any modifications.

6.8. TIME-STAMPING

Apple Public CA systems are continuously synchronized using the Network Time Protocol (NTP) by means of NTP pools dedicated to each Apple data center. NTP services on CA systems are monitored to ensure the NTP service is running and to detect if the system clock is out of synchronization with UTC.

7. CERTIFICATE, CRL, AND OCSP PROFILES

7.1. CERTIFICATE PROFILE

The CA System generates non-sequential Certificate serial numbers greater than zero (0) containing at least 64 bits of output from a CSPRNG.

7.1.1. Version Numbers

Certificates issued under this CPS are X.509 version 3.

7.1.2. Certificate Extensions

The Apple Public CA issues Certificates with the extensions shown below. All extensions are set in accordance with RFC 5280.

For Certificates other than Root Certificates, the Apple Public CA may include private Certificate extensions as long as they are: 1) marked non-critical, and 2) identified by an OID within an arc owned by the Subscriber (i.e., Apple Inc. or a subsidiary).

Root Certificates

Extension	Critical	Required /Optional	Value
Key Usage	Yes	Required	keyCertSign, cRLSign
Basic Constraints	Yes	Required	cA = True
Authority Key Identifier	No	Required	Same value as Subject Key Identifier
Subject Key Identifier	No	Required	keyIdentifier field contains identifier derived from Root Certificate's subjectPublicKey

Subordinate CA Certificates

Extension	Critical	Required /Optional	Value
Key Usage	Yes	Required	keyCertSign, cRLSign

Extension	Critical	Required /Optional	Value
Extended Key Usage	No	Required	For TLS-issuing: serverAuth and, optionally, clientAuth For Email-issuing: emailProtection and, optionally, clientAuth
Basic Constraints	Yes	Required	cA = True pathLenConstraint = zero (0)
Authority Key Identifier	No	Required	keyIdentifier field contains Identifier of Issuer CA's subjectPublicKey. authorityCertIssuer and authorityCertSerialNumber fields are not present.
Subject Key Identifier	No	Required	Identifier of the subject's Public Key
Certificate Policies	No	Required	Policy OIDs as specified in Section 7.1.6 Policy Qualifiers as specified in Section 7.1.8
CRL Distribution Point	No	Required	HTTP URL to CRL
Authority Information Access	No	Required	HTTP URL to OCSP Responder
Private Subscriber Extension	No	Optional	Private extension OID exists within an arc owned by the Issuing CA stated in the Subordinate CA Certificate's Subject DN.

TLS Certificates

TLS Certificates will include the "Required" extensions but may omit "Optional" ones.

Extension	Critical	Required /Optional	Value
Key Usage	Yes	Optional	For RSA keys: Digital Signature, Key Encipherment or For EC Keys: Digital Signature
Extended Key Usage	No	Required	Server Authentication
Basic Constraints	Yes	Optional	cA = False
Authority Key Identifier	No	Required	keyIdentifier field contains Identifier of Issuer CA's Certificate subjectPublicKey. authorityCertIssuer and authorityCertSerialNumber fields are not present.
Subject Key Identifier	No	Required	Identifier of the subject's Public Key
Certificate Policies	No	Required	Policy OIDs as specified in Section 7.1.6 Policy Qualifiers as specified in Section 7.1.8
CRL Distribution Point	No	Optional	HTTP URL to CRL
Authority Information Access	No	Required	HTTP URL to the OCSP Responder HTTP URL to the Issuer CA's Certificate
Subject Alternative Name	No	Required	dnsName (minimum of 1, maximum of 100) As specified in Section 7.1.4.3
Signed Certificate Timestamp (SCT)	No	Optional	At least three (3) SCTs and not more than two (2) SCTs from the same CT log operator.
Private Subscriber Extension	No	Optional	Private extension OID must exist within an arc owned by the Subscriber in the Subject DN.

S/MIME Certificates

S/MIME Certificates will include the "Required" extensions but may omit "Optional" extensions.

Extension	Critical	Required /Optional	Value
Key Usage	Yes	Required	<u>Key used for signing only</u> For RSA and ECC keys: digitalSignature <u>Key used for encryption only</u> For RSA keys: keyEncipherment or For ECC Keys: keyAgreement; and encipherOnly or decipherOnly <u>Key used both for signing and encryption</u> For RSA keys: digitalSignature and keyEncipherment For ECC keys: digitalSignature and keyAgreement and encipherOnly or decipherOnly
Extended Key Usage	No	Required	emailProtection, clientAuth
Basic Constraints	Yes	Optional	cA = False
Authority Key Identifier	No	Required	keyIdentifier field contains Identifier of Issuer CA's Certificate subjectPublicKey. authorityCertIssuer and authorityCertSerialNumber fields are not present.
Subject Key Identifier	No	Required	Identifier of the subject's Public Key
Certificate Policies	No	Required	Policy OIDs as specified in <u>Section 7.1.6</u> Policy Qualifiers as specified in <u>Section 7.1.8</u>
CRL Distribution Point	No	Optional	HTTP URL to CRL

Extension	Critical	Required /Optional	Value
Authority Information Access	No	Required	HTTP URL to OCSP Responder HTTP URL to Issuer CA's Certificate
Subject Alternative Name	No	Required	rfc882Name as specified in Section 7.1.4.2.1

7.1.3. Algorithm Object Identifiers

7.1.3.1. SubjectPublicKeyInfo

The Apple Public CA and Subscribers use these algorithms to generate Key Pairs:

Algorithm (Object Identifier)	Parameters	Hexadecimal Parameter Encoding
rsaEncryption (1.2.840.113549.1.1.1)	Always present. Content is NULL (explicit)	300d06092a864886f70d0101010500
id-ecPublicKey (1.2.840.10045.2.1)	Always present. Content is namedCurve P-256 key: secp256r1 1.2.840.10045.3.1.7 P-384 key: secp384r1 1.3.132.0.34	secp256r1: 301306072a8648ce3d020106082a8648ce3d030107 secp384r1: 301006072a8648ce3d020106052b81040022

7.1.3.2. Signature AlgorithmIdentifier

The Apple Public CA may use these signature algorithms:

Algorithm (Object Identifier)	Parameter	Hexadecimal Parameter Encoding
sha256WithRSAEncryption 1.2.840.113549.1.1.11	RSASSA-PKCS1-v1_5 with SHA-256	300d06092a864886f70d01010b0500
sha384WithRSAEncryption 1.2.840.113549.1.1.12	RSASSA-PKCS1-v1_5 with SHA-384	300d06092a864886f70d01010c0500

Algorithm (Object Identifier)	Parameter	Hexadecimal Parameter Encoding
ecdsa-with-SHA256 1.2.840.10045.4.3.2	ECDSA with SHA-256	300a06082a8648ce3 d040302
ecdsa-with-SHA384 1.2.840.10045.4.3.3	ECDSA with SHA-384	300a06082a8648ce3 d040303

7.1.4. Name Forms

7.1.4.1. Name Encoding

For all Certificates issued under this CPS, the encoded content of the Issuer DN matches byte-for-byte the encoded form of the Subject DN field of its Issuing CA Certificate.

For each CA Certificate in the Certification Path, the encoded content of the Subject DN field of a Certificate matches byte-for-byte identical all Certificates whose Subject Distinguished Names can be compared as equal according to RFC 5280, Section 7.1, and including expired and revoked Certificates.

7.1.4.2. Subject Information – Subscriber Certificates

Currently, the Apple Public CA does not include IP addresses in its TLS Certificates. Domain Names are included as specified in [Section 3.2.2](#). Subject DN fields only with metadata such as ".", "-", and " " (i.e., space) characters are not allowed.

The Apple Public CA issues S/MIME Certificates of type Mailbox-Verified and Sponsor-Verified, which are verified in accordance with [Section 3.2.2](#).

The fields listed below are included depending on the Certificate type:

TLS Certificates

Field	Required / Optional	Value (Example)
Country (C)	Required	ISO-3166 country code (e.g., US)
State (ST)	Required	State Name (e.g., California)
Organization (O)	Required	Subscriber Name (e.g., Apple Inc.)
Common Name	Optional	A verified Wildcard Domain Name or FQDN that is character-for-character identical to a <code>dNSName</code> in the Subject Alternative Name Extension.

S/MIME Certificates

Field	Certificate Type		Value (Example)
	Mailbox Validated	Sponsor Validated	
Country (C)	Not Used	Required	ISO-3166 country code (e.g., US)
State (ST)	Not Used	Required	State Name (e.g., California)
Organization (O)	Not Used	Required	Subscriber Name (e.g., Apple Inc.)
Common Name	Optional	Optional	Verified email address

7.1.4.2.1. Subject Alternative Name Extension

TLS and S/MIME Certificates contain the Subject Alternative Name Extension.

For TLS Certificates this extension is populated with at least one `dnsName` entry. Prior to issuing the Certificate, each `dnsName` is confirmed to be either a Wildcard Domain Name or FQDN. Every Domain Label in the `dnsName` is confirmed to be an LDH Label that conforms to the specification for a P-Label or a Non-Reserved LDH Label.

For S/MIME Certificates this extension is populated with the `rfc822Name`.

Field	Certificate Type		Value (Example)
	TLS	S/MIME	
<code>dnsName</code>	Required	Not Used	A verified Wildcard Domain Name or FQDN Internal Names are not allowed.
<code>rfc822Name</code>	Not Used	Required	Verified Email Address

7.1.4.3. Subject Information - Root Certificates and Subordinate CA Certificates

The Apple Public CA pursues issuance of Root Certificates and Subordinate CA Certificates that conform to the Subject DN structures below.

Root Certificates

Field	Value
Country (C)	US
Organization (O)	Apple Inc.

Field	Value
Common Name	Apple Public [type] [algorithm] Root CA [number]

Type: A string identifying the type of Certificates issued under the Root Certificate. For example: "TLS" or "Email". For future use, the string may contain the letters "EV" to indicate Extended Validation.

Algorithm: A string representing the algorithm used to generate the Root Certificate Key Pair. For example, "ECC" or "RSA".

Number: A numeric value that uniquely distinguishes the Root Certificate from others within the same type/algorithm pair.

Subordinate CA Certificates

Field	Value
Country (C)	US
Organization (O)	Apple Inc.
Common Name	Apple Public [type] [algorithm] CA [number] – G[generation]

Type: A string identifying the type of Certificates issued under the Subordinate CA Certificates. For example: "TLS" or "Email". For future use, the string may contain the letters "EV" to indicate Extended Validation.

Algorithm: A string representing the algorithm used to generate the Subordinate CA Certificate Key Pair. For example, "ECC" or "RSA".

Number: A numeric value that uniquely distinguishes the Subordinate CA Certificate from others within the same type/algorithm pair across all the Root Certificate naming space.

Generation: A numeric value that starts with one (1) and increases by one (1) when a new Certificate, that supersedes an existing one, is issued by the same Root Certificate.

7.1.5. Name Constraints

No stipulation.

7.1.6. Certificate Policy Object Identifier

Certificates issued by the Apple Public CA that contain the CertificatePolicy extension in accordance with [Section 7.1.2](#) are populated with at least one policy OID.

When a CAB/Forum reserved policy OID is included, its equivalent Apple reserved policy OID is also included.

Certificates for Issuing CAs will include only policy OIDs for which they are authorized to issue. In cases where Apple Inc. is the operator of the CA, the Certificate may contain the anyPolicy identifier (2.5.29.32.0) instead.

Inclusion of the policy OID indicates adherence to the requirements described in the Apple Public Root CP.

Policy OIDs included in Certificates are specified in the table below and mirror the Apple Public Root CP Section 7.1.6.1.

Certificate Type	CABF Policy OID	APR Policy OID
TLS Domain Validated	2.23.140.1.2.1	1.2.840.113635.100.5.19.2.2.1
TLS Organization Validated	2.23.140.1.2.2	1.2.840.113635.100.5.19.2.2.2
TLS Individual Validated	2.23.140.1.2.3	1.2.840.113635.100.5.19.2.2.3
S/MIME Only Sign and Encrypt	-	1.2.840.113635.100.5.11.5.1
S/MIME Only Sign	-	1.2.840.113635.100.5.11.5.2
S/MIME Only Encrypt	-	1.2.840.113635.100.5.11.5.3
Future Use	-	1.2.840.113635.100.5.11.5. <i>n</i> where <i>n</i> may be a number between 4 and 15, inclusive

7.1.7. Usage of Policy Constraints Extension

No stipulation.

7.1.8. Policy Qualifiers Syntax and Semantics

The Apple Public CA includes the CPSurl qualifier containing a URL pointing to this CPS in all Certificates except Root Certificates and Sub-CA Certificates.

Certificates with a CPSurl may also include the userNotice qualifier with a statement explaining conditions for reliance by a Relying Party.

7.1.9. Processing Semantics for the Critical Certificate Policies Extension

No stipulation.

7.2. CRL PROFILE

7.2.1. Version Number

CRLs issued by the Apple Public CA conform to the X.509 version 2 format.

Each CRL contains the following fields:

Field	Value
Issuer	Issuing CA's Subject DN
Signature Algorithm:	Algorithm used by the Issuing CA to sign Certificates
thisUpdate	Date of CRL issuance in UTCTime
nextUpdate	date of issuance of the next CRL in UTCTime
List of Revoked Certificates	Certificate's Serial Number Revocation date in UTCTime Reason code (optional in CRLs issued by Sub-CA Certificates)

7.2.2. CRL and CRL Entry Extensions

CRLs will include the "Required" extensions but may omit "Optional" ones.

CRLs issued by Root CAs will include the following:

CRL Entry Extension	Critical	Required/Optional	Value
CRL Number	No	Required	Monotonically increasing sequence number
Authority Key Identifier	No	Required	keyIdentifier field contains Identifier to Issuer CA's subjectPublicKey.
Reason Code	No	Required	When the extension is included, codes are used this way: keyCompromise: when a key is suspected of, or, is compromised. cessationOfOperation: when the CA is terminated. superseded: for any other cause. These reason codes are never used: unspecified and certificateHold .

CRLs issued by Subordinate CAs will include the following:

CRL Entry Extension	Critical	Required/Optional	Value
CRL Number	No	Required	Monotonically increasing sequence number
Authority Key Identifier	No	Required	keyIdentifier field contains Identifier to Issuer CA's subjectPublicKey.
Reason Code	No	Optional	<p>When the extension is included, codes are used this way:</p> <p>keyCompromise: when a key is suspected of, or, is compromised. Apple Public CA may transition other revocation reasons to keyCompromise if a compromise is confirmed and the notAfter date has not been exceeded.</p> <p>cessationOfOperation: when the Subscriber Certificates are revoked because the CA is terminated or is to be revoked.</p> <p>superseded: for any other cause.</p> <p>These reason codes are never used: unspecified and certificateHold.</p>

7.3. OCSF PROFILE

7.3.1. Version Number

OCSF responses conform to version 1 in RFC 6960.

OCSF responses provided by an OCSF Responder from a Root CA will include the following fields:

Field	Value
Signature Algorithm	sha256WithRSAEncryption or ecdsa-with-SHA256
thisUpdate	Time at which the status indicated is known to the responder to be correct

Field	Value
nextUpdate	Time at which newer information will be available
Responder's Identifier	OCSP Responder's Public Key SHA1 hash
Produced At	Time when the response was signed
Response for each Certificate	<p>Certificate Identifier: hashes of the issuer's DN and Public Key, and the Certificate's serial number</p> <p>Certificate Status: Good: for valid Certificates. Revoked: for revoked Certificates. The revocationReason field within the RevokedInfo of the CertStatus is present and is populated with the same values for a CRL issued by a Root CA described in Section 7.2.2. Unknown: for Certificates not known to the Root CA.</p>

OCSP responses provided by an OCSP Responder from a Subordinate CA will include the following fields:

Field	Value
Signature Algorithm	sha256WithRSAEncryption or ecdsa-with-SHA256
thisUpdate	Time at which the status indicated is known to the responder to be correct
nextUpdate	Time at which newer information will be available
Responder's Identifier	OCSP Responder's Public Key SHA1 hash
Produced At	Time when the response was signed

Field	Value
Response for each Certificate	<p>Certificate Identifier: hashes of the issuer's DN and Public Key, and the Certificate's serial number</p> <p>Certificate Status:</p> <p>Good: for valid Certificates and pre-Certificates (with no assigned Certificate)</p> <p>Revoked: for revoked Certificates. When reason codes are used, the revocationReason field within the RevokedInfo of the CertStatus is present and is populated with the same values in Section 7.2.2.</p> <p>Unknown: for Certificates not known to the issuing CA</p>

7.3.2. OCSP Extensions

OCSP responses issued by Subordinate CAs or delegated responders will meet the following:

OCSP Extension	Critical	Required/Optional
Nonce	No	Required (if present in request)

8. COMPLIANCE AUDIT AND OTHER ASSESSMENTS

8.1. FREQUENCY OR CIRCUMSTANCES OF ASSESSMENT

An audit will be performed by an independent external auditor to assess the adequacy of the Apple Public CA's business practices disclosure and compliance with this CPS for all CAs technically capable of issuing publicly trusted Certificates. The audit is performed annually and executed in a way that prevents unaudited periods from one audit to the next starting from the CA Key Pair generation until the expiration or revocation of all Certificates associated to it.

For Root, Sub-CA, and TLS Certificates, the auditor will also assess controls to the then-current standards:

- CPA Canada Trust Service Principles and Criteria for Certification Authorities, and
- CPA Canada WebTrust Principles and Criteria for Certification Authorities – SSL Baseline with Network Security.

For S/MIME Certificates, the auditor will also assess controls to the current standard:

- CPA Canada Trust Service Principles and Criteria for Certification Authorities.

8.2. IDENTITY/QUALIFICATIONS OF ASSESSOR

The auditors performing the annual audit are from an independent audit firm that is approved to audit according to CPA Canada WebTrust for Certification Authorities Principles and Criteria.

The Apple Public CA ensures its WebTrust auditors meet the requirements of [Section 8.2](#) of the Baseline Requirements and Mozilla Root Store Policy version 2.7.1 [Section 3.2](#).

8.3. ASSESSOR'S RELATIONSHIP TO ASSESSED ENTITY

The Apple Public CA will retain an independent external audit firm.

8.4. TOPICS COVERED BY ASSESSMENT

The audit will meet the requirements of the audit schemes identified in [Section 8.1](#).

The Apple Public CA's compliance team ensures that the audit is conducted in accordance with the latest version of the schemes defined in [Section 8.1](#).

8.5. ACTIONS TAKEN AS A RESULT OF DEFICIENCY

The Apple CA Policy Authority will determine the significance of identified deficiencies arising from external audits or internal self-assessments, and will prescribe remediation requirements. The Apple CA Policy Authority will be responsible for seeing that remediation efforts are completed in a timely manner.

8.6. COMMUNICATION OF RESULTS

The Apple Public CA works with its auditor to ensure audit reports conform with the content and format requirements in the Apple Public Root CP Section 8.6. Audit results are communicated to the Apple CA Policy Authority and to others as deemed appropriate based on agreements, regulations, and law. The Apple Public CA submits audit results to its Root CA providers.

Copies of the latest audit reports can be found in the Apple Public CA's Repository as specified in [Section 2.1](#). The Apple Public CA publishes them no later than 3 months from the end of the audit period; otherwise, it works with the Root CA, Application Software Providers and the auditors to provide a satisfactory explanation.

8.7. SELF-AUDITS

On at least a quarterly basis, the Apple Public CA performs regular internal audits against at least three percent (3%) of TLS Certificates issued since the last internal audit.

Root Certificates

The Apple Public CA validates Root Certificates issued for compliance to profiles and naming structures as specified in [Section 7](#), and verifies adherence to key sizes and algorithms as specified in [Section 6](#).

Sub-CA Certificates

The Apple Public CA validates Sub-CA Certificates issued for compliance to profiles and naming structures as specified in [Section 7](#), and verifies adherence to key sizes and algorithms as specified in [Section 6](#).

TLS Certificates

The Apple Public CA automatically validates all TLS Certificates issued for compliance to profiles and naming structures as specified in [Section 7](#), and verifies adherence to key sizes and algorithms as specified in [Section 6](#).

9. OTHER BUSINESS AND LEGAL MATTERS

9.1. FEES

9.1.1. Certificate Issuance or Renewal Fees

The Apple Public CA reserves the right to charge Subscriber fees for Certificate issuances and renewals. The Apple Public CA may change its fees at any time in accordance with the applicable Subscriber agreement.

9.1.2. Certificate Access Fees

The Apple Public CA reserves the right to charge a fee for making a Certificate available or for access to its Certificate databases.

9.1.3. Revocation or Status Information Access Fees

The Apple Public CA does not charge a Certificate revocation fee or a fee for checking the validity status of an issued Certificate using a CRL. The Apple Public CA reserves the right to charge a fee for providing customized CRLs or other value-added revocation and status information services.

9.1.4. Fees for Other Services

The Apple Public CA does not charge a fee for access to this CPS or for simply viewing the document. Any additional use of this CPS including but not limited to reproduction, redistribution, modification, or creation of derivative works, may be subject to a license agreement with the entity holding the copyright to the document. The Apple Public CA reserves the right to charge for any other additional or future services not currently outlined in this CPS.

9.1.5. Refund Policy

No stipulation.

9.2. FINANCIAL RESPONSIBILITY

To the extent permitted by applicable law Apple disclaims any warranties, including any warranty of merchantability or fitness for a particular purpose. All relying parties must bear the risk of reliance on any Certificates issued by the Apple Public CA.

9.2.1. Insurance Coverage

Apple maintains general liability insurance coverage.

9.2.2. Other Assets

No stipulation.

9.2.3. Insurance or Warranty Coverage for End-Entities

No stipulation.

9.3. CONFIDENTIALITY OF BUSINESS INFORMATION

9.3.1. Scope of Confidential Information

The following information is considered Apple confidential and protected against disclosure using a reasonable degree of care and may not be disclosed:

- Private Keys and data used to access the CA system,
- Business and security plans including but not limited to business continuity, incident response, contingency, and disaster recovery plans,
- Security mechanisms used to protect the confidentiality, integrity, or availability of information,
- Information held by the Apple Public CA as personal or non-public information in accordance with Section 9.4, and
- Transaction records, audit logs, archival records, financial audit records, and external or internal audit trail records and any audit reports.

9.3.2. Information Not Within the Scope of Confidential Information

The following information shall not be considered confidential:

- Information included in Certificates,
- Root Certificates and Sub-CA Certificates,
- Information contained in this CPS, and
- Any Certificate status or Certificate revocation reason code.

9.3.3. Responsibility To Protect Confidential Information

Confidential information will not be released to any third parties unless required by law or requested by a court with jurisdiction over the Apple Public CA. Apple's employees, agents, and contractors are responsible for protecting confidential information and are contractually obligated to do so. Employees receive training on how to handle confidential information. The confidential information will be kept confidential even after the termination of this CPS.

9.4. PRIVACY OF PERSONAL INFORMATION

9.4.1. Privacy Plan

The Apple Public CA follows the Apple privacy policy which is available at <https://www.apple.com/legal/privacy>.

9.4.2. Information Treated as Private

See Section 9.4.1.

9.4.3. Information Not Deemed Private

Any information publicly available through a Certificate, CRL or their contents is not deemed private.

9.4.4. Responsibility To Protect Private Information

See Section 9.4.1.

9.4.5. Notice and Consent To Use Private Information

See Section 9.4.1.

9.4.6. Disclosure Pursuant to Judicial or Administrative Process

See Section 9.4.1.

9.4.7. Other Information Disclosure Circumstances

See Section 9.4.1.

9.5. *INTELLECTUAL PROPERTY RIGHTS*

Apple and/or its business partners own the intellectual property rights in Apple Public CA's services, including the Certificates, CRLs, trademarks used in providing the services, the policies and procedures supporting the operations of such services, the CA infrastructure, information provided via OCSP, and this CPS. Apple, iOS, and macOS are trademarks of Apple Inc., in the United States and other countries. Apple grants permission to reproduce and distribute Certificates on a nonexclusive and royalty-free basis, provided that they are reproduced and distributed in full. Private Keys and Public Keys remain the property of the Subscribers who rightfully hold them. All secret shares (distributed elements) of the Apple Private Keys are the property of Apple.

9.6. *REPRESENTATIONS AND WARRANTIES*

9.6.1. CA Representations and Warranties

Except as expressly stated in this CPS or in a separate agreement with a Subscriber, Apple does not make any representations regarding its products or services. To the extent permitted by applicable law Apple disclaims any warranties, including any warranty of merchantability or fitness for a particular purpose.

Subject to the terms and conditions of this CPS and any applicable agreement between the parties, Apple represents to Subscribers that they:

- Comply in all material aspects with this CPS, and all applicable laws and regulations,
- Have verified all Certificates issued by the Apple Public CA using the processes outlined in this CPS,
- Publish and update CRLs and OCSP responses on a regular basis,

- Meet the minimum requirements in the CAB Forum Baseline Requirements, and
- Maintain a Repository of public information on its website (See [Section 2.1](#)).

9.6.2. RA Representations and Warranties

Subject to the terms and conditions of this CPS and any applicable agreement between the parties, RAs represent that:

- The RA's Certificate issuance and management services conform to this CPS, and
- All Certificates requested by the RA meet the requirements of this CPS.

9.6.3. Subscriber Representations and Warranties

Subscribers are solely responsible for any information provided as part of a registration request and for all transactions that use the Subscriber's Private Key, regardless of whether such use was authorized. Subscribers are required to notify the Apple Public CA if a change occurs that could affect the status of the Certificate, or if they believe that the Certificate information or Private Key have been compromised or are no longer valid or secure.

Apple's Subscriber Terms of Use will include the following Subscriber requirements and obligations:

- Securely generating its Private Keys and protecting its Private Keys from compromise,
- Providing accurate and complete information when communicating with the Apple Public CA,
- Confirming the accuracy of the Certificate data prior to using the Certificate,
- Promptly (i) requesting revocation of a Certificate, cease using it and its associated Private Key, and notify the Apple Public CA if there is any actual or suspected misuse or compromise of the Private Key associated with the Public Key included in the Certificate, and (ii) requesting revocation of the Certificate, and ceasing using it, if any information in the Certificate is or becomes incorrect or inaccurate,
- Ensuring that individuals managing Certificates on behalf of an organization have received security training appropriate to the Certificate,
- Using the Certificate only for authorized and legal purposes, consistent with the Certificate purpose, this CPS, and the relevant Subscriber Terms of Use, and
- Promptly cease using the Certificate and related Private Key after the Certificate's expiration.

Subscriber Agreements may include additional representations and warranties.

9.6.4. Relying Party Representations and Warranties

Each Relying Party represents that, prior to relying on a Certificate issued by the Apple Public CA, it:

- Obtained sufficient knowledge on the use of Certificates and PKI,
- Studied the applicable limitations on the usage of Certificates and agrees to Apple's limitations on liability related to the use of Certificates,
- Has read, understands, and agrees to the Apple Relying Party Agreement and this CPS,
- Verified all Certificates in the certificate chain using the relevant CRL or OCSP,
- Will not use an expired or revoked Certificate, and
- Will take all reasonable steps to minimize the risk associated with relying on a digital signature, including only relying on a Certificate after considering:
 - applicable law and the legal requirements for identification of a party, protection of the confidentiality or privacy of information, and enforceability of the transaction,
 - the intended use of the Certificate as listed in the Certificate or this CPS,
 - the data listed in the Certificate,
 - the economic value of the transaction or communication,
 - the potential loss or damage that would be caused by an erroneous identification or a loss of confidentiality or privacy of information in the application, transaction, or communication,
 - the Relying Party's previous course of dealing with the Subscriber,
 - the Relying Party's understanding of trade, including experience with computer-based methods of trade, any other indicia of reliability or unreliability pertaining to the Subscriber and/or the application, communication, or transaction, and
 - any unauthorized reliance on a Certificate is at the party's own risk.

Relying Party Agreements may include additional representations and warranties.

9.6.5. Representations and Warranties of Other Participants

The parties agree that there are no third-party beneficiaries, other than those specifically identified herein under this CPS and any other applicable agreement or Terms of Use.

9.7. *DISCLAIMERS OF WARRANTIES*

EXCEPT AS EXPRESSLY STATED IN SECTION 9.6.1, ALL CERTIFICATES AND ANY RELATED SOFTWARE AND SERVICES ARE PROVIDED "AS IS" AND "AS AVAILABLE". TO THE MAXIMUM EXTENT PERMITTED BY LAW, APPLE DISCLAIMS ALL EXPRESS AND IMPLIED WARRANTIES, INCLUDING ALL WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT. APPLE DOES NOT WARRANT THAT ANY SERVICE OR PRODUCT WILL MEET ANY EXPECTATIONS OR THAT ACCESS TO CERTIFICATES WILL BE TIMELY OR ERROR-FREE. APPLE DOES NOT GUARANTEE THE AVAILABILITY OF ANY PRODUCTS OR SERVICES AND MAY MODIFY OR DISCONTINUE ANY PRODUCT OR SERVICE OFFERING AT ANY TIME.

9.8. *LIMITATIONS OF LIABILITY*

ANY ENTITY USING AN APPLE CERTIFICATE OR SERVICE WAIVES ALL LIABILITY OF APPLE RELATED TO SUCH USE, PROVIDED THAT THE APPLE PUBLIC CA HAS MATERIALLY COMPLIED WITH THIS CPS IN PROVIDING THE CERTIFICATE OR SERVICE. APPLE'S LIABILITY FOR CERTIFICATES AND SERVICES THAT DO NOT MATERIALLY COMPLY WITH THIS CPS IS LIMITED AS SET FORTH IN THE APPLE RELYING PARTY AGREEMENT. THEY FURTHER ACKNOWLEDGE THAT THE CERTIFICATES ARE NOT INTENDED OR SUITABLE FOR USE IN SITUATIONS OR ENVIRONMENTS WHERE THE FAILURE OR TIME DELAYS OF, OR ERRORS OR INACCURACIES IN THE CONTENT, DATA OR INFORMATION PROVIDED BY, THE CERTIFICATES AND SERVICES COULD LEAD TO DEATH, PERSONAL INJURY, OR SEVERE PHYSICAL OR ENVIRONMENTAL DAMAGE, INCLUDING WITHOUT LIMITATION THE OPERATION OF NUCLEAR FACILITIES, AIRCRAFT NAVIGATION OR COMMUNICATION SYSTEMS, AIR TRAFFIC CONTROL, LIFE SUPPORT OR WEAPONS SYSTEMS.

All liability is limited to actual and legally provable damages. Apple is not liable for:

- Any indirect, consequential, special, or punitive damages or any loss of profit, revenue, data, or opportunity, even if Apple is aware of the possibility of such damages,
- Liability related to fraud or willful misconduct of the Applicant,
- Liability related to use of a Certificate that exceeds the limitations on use, value, or transactions as stated either in the Certificate, this CPS or any applicable Subscriber or Relying Party agreement,
- Liability related to the security, usability, or integrity of products not supplied by Apple, including the Subscriber's and Relying Party's software or hardware, or
- Liability related to the compromise of a Subscriber's Private Key.

The limitations in this section apply to the maximum extent permitted by law and apply regardless of (i) the reason for or nature of the liability, including tort claims, (ii) the number of claims of liability, (iii) the extent or nature of the damages, (iv) whether Apple

failed to follow any provision of this CPS, or (v) whether any provision of this CPS was proven ineffective.

The disclaimers and limitations on liabilities in this CPS are fundamental terms to the use of Certificates and services provided by the Apple Public CA.

To the extent the Apple Public CA has issued and managed the Certificate(s) at issue in compliance with this CPS, Apple shall have no liability to the Subscriber, any Relying Party, or any other third parties for any damages or losses suffered as a result of the use or reliance on such Certificate(s). To the extent permitted by applicable law, Subscriber Agreements and Relying Party Agreements shall limit Apple's and the applicable Affiliates' liability. Limitations of liability shall include an exclusion of indirect, special, incidental, and consequential damages.

The liability (and/or limitation thereof) of Subscribers shall be as set forth in the applicable Subscriber Agreements.

The liability (and/or limitation thereof) of Enterprise RAs and the Apple Public CA shall be set out in the agreement(s) between them.

The liability (and/or limitation thereof) of Relying Parties shall be as set forth in the applicable Relying Party Agreements.

9.9. INDEMNITIES

9.9.1. Indemnification by Apple

To the extent permitted by applicable law, Apple shall indemnify each Application Software Vendor against any claim, damage, or loss suffered by an Application Software Vendor related to a Certificate issued by the Apple Public CA, regardless of the cause of action or legal theory involved, except where the claim, damage, or loss suffered by the Application Software Vendor was directly caused by the Application Software Vendor's software displaying either (1) a valid and trustworthy Certificate as not valid or trustworthy or (2) displaying as trustworthy (i) a Certificate that has expired or (ii) a revoked Certificate where the revocation status is available online but the Application Software Vendor's software failed to check or ignored the status. Such Indemnification responsibilities shall be limited by the monetary limitation of liability amounts identified in the applicable agreements.

9.9.2. Indemnification by Subscribers

To the extent permitted by law, each Subscriber shall indemnify Apple, its partners, and any cross-signed entities, and their respective directors, officers, employees, agents, and contractors against any loss, damage, or expense, including reasonable attorney's fees, related to (i) any misrepresentation or omission of material fact by Subscriber, regardless of whether the misrepresentation or omission was intentional or unintentional; (ii) Subscriber's breach of the Subscriber Agreement, this CPS, or applicable law; (iii) the compromise or unauthorized use of a Certificate or Private Key caused by the Subscriber's negligence or intentional acts; (iv) Subscriber's misuse of

the Certificate or Private Key; or (v) failure to notify the Apple Public CA that the Private Key and its accompanying Certificate have been compromised or are no longer valid.

The applicable Subscriber Agreement may include additional indemnity obligations.

9.9.3. Indemnification by Relying Parties

To the extent permitted by law, each Relying Party shall indemnify Apple, its partners, and any cross-signed entities, and their respective directors, officers, employees, agents, and contractors against any loss, damage, or expense, including reasonable attorney's fees, related to (i) any misrepresentation or omission of material fact by Relying Party, regardless of whether the misrepresentation or omission was intentional or unintentional; (ii) Relying Party's breach of the Relying Party Agreement, this CPS, or applicable law; (iii) the compromise or unauthorized use of a Certificate or Private Key caused by the Relying Party's negligence or intentional acts; (iv) Relying Party's misuse of the Certificate or Private Key, or (v) failure to notify the Apple Public CA that the Private Key and its accompanying Certificate have been compromised or are no longer valid.

The applicable Relying Party Agreement may include additional indemnity obligations.

9.10. TERM AND TERMINATION

9.10.1. Term

The CPS and/or Relying Party Agreement, and any amendments thereto, become effective upon publication to the Repository (See [Section 2.1](#)). The CPS and relevant agreements will continue until either an updated version is published to the Repository, (see [Section 2.1](#)), or they are terminated in accordance with the CPS or the termination provisions of the applicable agreement.

9.10.2. Termination

This CPS is amended from time to time, and shall remain in effect until replaced by a newer version.

9.10.3. Effect of Termination and Survival

Upon termination of this CPS, Subscriber Agreement and/or Relying Party Agreement, Subscribers and Relying Parties are nevertheless bound by their terms for all Certificates issued for the remainder of the validity periods of such Certificates, until replaced by newer versions of those documents.

9.11. INDIVIDUAL NOTICES AND COMMUNICATIONS WITH PARTICIPANTS

The notice provisions for this CPS are outlined in [Section 2.2](#). Notices are deemed effective only after acknowledgment of receipt from Apple. Apple may provide notice and provide updates to this CPS, Subscriber Agreement and/or Relying Party Agreement

by making them publicly available in the Repository, see [Section 2.1](#). Notices and updates to this CPS by Apple are deemed effective upon public availability in the Repository.

Notices to Application Software Vendors are sent out in accordance with the respective requirements.

9.12. AMENDMENTS

9.12.1. Procedure for Amendment

This CPS is reviewed as frequently as necessary, but at least once a year. This CPS, Subscriber Agreement, and/or Relying Party Agreement may be amended at any time without prior notice. The latest CPS is made publicly available in the Repository (See [Section 2.1](#)). Updates supersede any designated or conflicting provisions of the referenced version of the CPS. Controls are in place to reasonably ensure that this CPS is not amended and published without the prior authorization of the Apple CA Policy Authority.

9.12.2. Notification Mechanism and Period

Apple Public CA posts CPS revisions to its Repository (See [Section 2.1](#)). The Apple Public CA may make changes to this CPS without notice.

9.12.3. Circumstances Under Which OID Must Be Changed

The Apple CA Policy Authority is solely responsible for determining whether an amendment to the CPS requires an OID change.

9.13. DISPUTE RESOLUTION PROVISIONS

Any litigation or other dispute resolution related to the use of the Certificates in this CPS will take place in the Northern District of California, and Relying Parties consent to the personal jurisdiction of and exclusive venue in the state and federal courts within that District with respect to any such litigation or dispute resolution.

Parties are required to notify the Apple Public CA and attempt to resolve disputes directly with the Apple Public CA before resorting to any dispute resolution mechanism, including adjudication or any type of alternative dispute resolution.

9.14. GOVERNING LAW

The terms in this CPS are governed by and construed in accordance with the laws of the United States and the State of California, except that body of California law concerning conflicts of law.

9.15. COMPLIANCE WITH APPLICABLE LAW

This CPS is subject to all applicable laws and regulations.

9.16. MISCELLANEOUS PROVISIONS

9.16.1. Entire Agreement

This CPS, the Terms of Use and the applicable agreement represents the entire agreement, and contractually obligates each Subscriber, Relying Party and RA to comply with this CPS and applicable industry guidelines. The Apple Public CA also requires each party using its products and services to enter into an agreement that delineates the terms associated with the product or service. Third parties may not rely on or bring action to enforce such agreement.

9.16.2. Assignment

Entities operating under this CPS may not assign their rights or obligations without the prior written consent of Apple. Any assignment made in violation of this section shall be voided upon Apple's request. Severability

If a provision of this CPS is held invalid or unenforceable by a competent court or tribunal, the remainder of the CPS will remain valid and enforceable.

9.16.3. Enforcement (Attorneys' Fees and Waiver of Rights)

Apple may seek indemnification and attorneys' fees from a party for damages, losses, and expenses related to that party's conduct. Apple's failure to enforce a provision of this CPS does not waive Apple's right to enforce the same provision later or right to enforce any other provision of this CPS. To be effective, waivers must be in writing and signed by Apple.

9.16.1. Force Majeure

Apple is not liable for a delay or failure to perform an obligation under this CPS to the extent that the delay or failure is caused by an occurrence beyond Apple's reasonable control. The operation of the Internet is beyond Apple's reasonable control.

9.17. OTHER PROVISIONS

No stipulation.

Appendix A: Apple Root and Subordinate CAs Hierarchy

This table lists all valid Root Certificate and Sub-CA Certificates issued by the Apple Public CA. The list is organized alphabetically using the Root Certificate Common Name first and then Sub-CA Certificate Common Name.

Root Certificate Common Name	Sub-CA Certificate Common Name	Certificate Serial Number	Type of Subscriber Certificates Issued
Apple Public Email ECC Root CA 1	N.A. This is a Root CA.	77:3C:5E:3F:B7:F6:9B:83:9A:F9:FA:3D:DA:98:C1:27	Sub-CA Certificates for SMIME
Apple Public Email RSA Root CA 1	N.A. This is a Root CA.	30:1D:C3:12:31:84:00:48:2C:40:18:C3:40:3B:A0:06	Sub-CA Certificates for TLS
Apple Public TLS ECC Root CA 1	N.A. This is a Root CA.	4F:EE:9B:14:C1:59:DA:15:BB:9E:F0:D6:D1:72:9C:DF	Sub-CA Certificates for TLS
Apple Public TLS RSA Root CA 1	N.A. This is a Root CA.	23:ED:5C:70:CD:8E:EA:F6:36:6C:BF:C5:F6:63:0B:AA	Sub-CA Certificates for SMIME
Apple Public Email ECC Root CA 1	Apple Public Email ECC CA 1 - G1	52:D6:53:71:84:53:65:95:FF:7B:70:BF:8A:B6:0F:71	S/MIME Certificates
Apple Public Email RSA Root CA 1	Apple Public Email RSA CA 1 - G1	19:9C:EA:8C:B9:3D:3C:62:9A:27:6A:E7:EC:BB:8E:17	TLS Certificates
Apple Public TLS ECC Root CA 1	Apple Public TLS ECC CA 1 - G1	63:C9:4D:74:A4:AB:93:80:22:8D:30:27:41:5E:06:66	TLS Certificates
Apple Public TLS RSA Root CA 1	Apple Public TLS RSA CA 1 - G1	2A:BF:99:F3:ED:8E:06:0C:19:4E:9A:77:F1:12:B9:E2	S/MIME Certificates

Appendix B: Verification Sources

Sources List

Ordered alphabetically by Jurisdiction

Jurisdiction	Agency Information
StateOrProvinceName For: California CountryName: For: United States	Name: California Secretary of State Website: https://businesssearch.sos.ca.gov Registration Number Format: (Entity Number) For corporations: The letter C followed by an entity number that is at least a 7-digit number. For example: C1234567 For a limited liability company or limited partnership: A 12-digit entity number. For example: 123456789012
StateOrProvinceName For: Delaware CountryName: For: United States	Name: State of Delaware, Department of State: Division of Corporations Website: https://icis.corp.delaware.gov/Ecorp/EntitySearch/NameSearch.aspx Registration Number Format: (State File Number) A 7-digit number. For example: 1234567
